26 Diesel-engine manufacturers	10	28 Propellers	124
26.1 Introduction	12	28.1 Introduction	126
26.2 Engine categories	13	28.2 Fixed-pitch propellers	128
26.3 Engine manufacturers	15	28.3 Use of controllable-pitch propellers	130
26.4 Number of engine manufacturers worldwide	16	28.4 Fixed-pitch propellers, construction	134
26.5 Diesel engines for ship propulsion and diesel-power plants	39	28.5 Controllable-pitch propellers, construction	135
26.6 Future of the diesel-engine industry	39	28.6 Propeller shaft and coupling flange	139
26.7 Overview of diesel engines ordered in 2015	44	28.7 Stern tube	140
26.8 Complete list of diesel engine manufacturers, March 2016	46	28.8 Stern-tube seals	141
26.9 Some examples of new diesel engines with high load parameters	46	28.9 Hydraulic bolts	143
26.10 The development of the modern low-speed wo-stroke marine diesel engine	48	28.10 Material for controllable-pitch propellers	143
		28.11 Propeller design	143
		28.12 Cavitation	144
		28.13 Calculating the propeller-blade model	146
		28.14 Examples of other propulsion systems with controllable-pitch propellers	147
		28.15 Propeller efficiency	152
27 Ship propulsion	66	29 Use of materials for diesel engines	156
27.1 Introduction	68	29.1 General use of materials	158
27.2 Ship types and hull resistance	69	29.2 Cast iron	158
27.3 Load lines of a ship	69	29.3 Steel	159
27.4 Ship dimensions	70	29.4 Cast steel	160
27.5 Hull shape	70	29.5 Forged steel	160
27.6 Ship's resistance <i>R</i>	72	29.6 Steel alloys	160
27.7 Screw propulsion	77	29.7 Aluminium	161
27.8 Propeller types	77	29.8 Ceramic materials	162
27.9 Flow conditions around the propeller	79	29.9 Specific materials for engine parts: engine classification according to the four categories	162
27.10 Propeller dimensions	83	29.10 Special finishes and heat treatments	169
27.11 Operating conditions of a propeller	87	29.11 Examples of modern material usage	172
27.12 Increasing ship speed	93		
27.13 Parameters causing heavy running conditions	93	30 Casting, forging and welding engine parts	180
27.14 Manoeuvring speeds	94	30.1 Introduction	182
27.15 Direction of propeller rotation: lateral forces	94	30.2 Cast-iron parts for diesel engines	182
27.16 Engine layouts and load diagrams	95	30.3 Advantages of cast engine-parts	183
27.17 Propulsion- and engine characteristics	95	30.4 Foundries	183
27.18 Electronic governors with load limitation	97	30.5 Casting process	183
27.19 Use of diagrams	97	30.6 Casting location	187
27.20 Summarising the effects of the various types of resistance on engine operation	101	30.7 Moulds	187
27.21 Comments	103	30.8 Filling the casting dies	187
27.22 Future improvements in propulsion efficiency and reduction of CO ₂	103	30.9 Mould assembly	188
27.23 March 2017	112	30.10 Cleaning the castings	193
27.24 Some distinctive issues	112	30.11 Casting stresses	194
27.25 Slow steaming of merchant ships	116	30.12 Checking for air inclusions and damage	194
27.26 Ship propulsion with gas- and dual-fuel engines	120	30.13 Dimensional checks	194
		30.14 Operations at the machining factory	195
		30.15 Forging crankshafts	201

30.16	Forging gear parts for two-stroke crosshead engines	208		
30.17	Building a two-stroke crosshead engine A-frame	216		
30.18	Forging crankshafts, 2009 report	219		
30.19	Manufacturing pistons	234		
30.20	Manufacture of inlet and outlet valves	243		
30.21	Manufacturing cylinder liners	255		
31	Reconditioning engines and their parts	266		
31.1	Introduction	268		
31.2	Four-stroke engines	271		
31.3	Two-stroke engines	308		
31.4	The Swedish Club: Main Engine Damage	332		
32	Maintenance and repairs	338		
32.1	Introduction	340		
32.2	Types of maintenance	340		
32.3	Instruction manuals/ Maintenance manuals	340		
32.4	Engine maintenance	342		
32.5	Maintenance for small engines, category I	346		
32.6	Examples of maintenance for engines, category III	348		
32.7	Some examples of maintenance for large two-stroke crosshead engines, category IV	356		
32.8	Excessive wear or 'scuffing' of the cylinder liners in a two-stroke crosshead engine	367		
32.9	Trouble shooting excessive cylinder liner wear	388		
32.10	Damage report Wärtsilä Vasa 4R32	392		
32.11	Sleeve bearings, theory and damage	398		
33	Regulations for propulsion engines, classification, repair and damage			414
33.1	Introduction			416
33.2	The IMO: International Maritime Organization			416
33.3	Classification societies			418
33.4	Periodic inspection of the diesel engine and its parts			419
33.5	Examples: Germanischer Lloyd			422
33.6	Materials for diesel engines			426
33.7	Tests and trials			427
33.8	Testing mass-produced engines			430
33.9	Shipboard trials			430
33.10	Some important points			431
33.11	Regulations for propulsion engines			433
33.12	Engine alignment			442
33.13	The standard measurements and calculations to determine the crankshaft deflection measurement (r_o) for four different types of crankshafts			444
33.14	Procedure for reconditioning parts			444
33.15	New parts			445
33.16	Special cases of wear and damage to engine parts			445
33.17	Damages to the engine or engine parts			447
33.18	Damage			447
33.19	Examples of certificates			449
