*KEYNOTE LECTURE - THE CHALLENGE OF TECHNOLOGY INNOVATION*

### Papers submitted

|                                                                                                                                                                                     |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 1. MANOEUVRABILITY                                                                                                                                                                  |     |
| 1.1. Teresa Abramowicz-Gerigk:                                                                                                                                                      | 8   |
| <i>PRACTICAL ASPECTS OF APPLICATION OF SHIP SLOW SPEED MANOEUVRING STANDARDS.</i>                                                                                                   |     |
| 1.2. Jarosław Artyszuk:                                                                                                                                                             | 17  |
| <i>A REDUCTION OF SWAY ADDED MASS IN THE SURGE MANOEUVRING MOTION EQUATION.</i>                                                                                                     |     |
| 1.3. Farhood Azarsina, Mohammad Saeed Seif:                                                                                                                                         | 31  |
| <i>SUBMARINE MANOEUVRING SIMULATION CONSIDERING THE DYNAMIC CONTROL SYSTEMS.</i>                                                                                                    |     |
| 1.4. Zbigniew Burciu:                                                                                                                                                               | 41  |
| <i>THE INFLUENCE OF HYDRO-METEOROLOGICAL PARAMETERS ON SEARCH AREA DETERMINATION MODEL ACCURACY.</i>                                                                                |     |
| 1.5. Guillaume Defortrie, Marc Vantorre:                                                                                                                                            | 49  |
| <i>MODELLING NAVIGATION IN MUDDY AREAS.</i>                                                                                                                                         |     |
| 1.6. Jerzy W. Doerffer:                                                                                                                                                             | 59  |
| <i>SUMMARY REPORT ON DEVICES IMPROVING THE MANOEUVRABILITY CHARACTERISTICS OF SHIPS.</i>                                                                                            |     |
| 1.7. Tobias Haack, Stefan Kruger:                                                                                                                                                   | 80  |
| <i>A NEW CONCEPT FOR THE SIMULATION OF EXTREME MANOEUVRES IN AN EARLY DESIGN STAGE.</i>                                                                                             |     |
| 1.8. Jan Kulczyk, Tomasz Tabaczek:                                                                                                                                                  | 90  |
| <i>EFFECTIVENESS OF RUDDERS ON INLAND NAVIGATION VESSELS.</i>                                                                                                                       |     |
| 1.9. Marina P. Lebedeva:                                                                                                                                                            | 99  |
| <i>ON THE PHYSICAL ORIGIN OF SHIP STRAIGHT LINE STABILITY.</i>                                                                                                                      |     |
| 1.10. Dominique Marichal, B. Vincent, M-L Gobert:                                                                                                                                   | 108 |
| <i>STUDY OF THE DYNAMICS OF A TRAWL GEAR (MANOEUVRABILITY AND SECURITY).</i>                                                                                                        |     |
| 1.11. Wojciech A. Misiąg:                                                                                                                                                           | 118 |
| <i>CAN WE USE THE MANOEUVRING CRITERIA FOR THE SELECTION OF SHIP'S PRINCIPAL PARTICULARS – A METHODOLOGY FOR INCORPORATING OF MANOEUVRING CRITERIA INTO AN INITIAL SHIP DESIGN.</i> |     |
| 1.12. Leszek Morawski, Nguyen Cong Vinh:                                                                                                                                            | 126 |
| <i>A VESSEL TRAJECTORY AUTOPILOT WITH AUTOTUNING – FUZZY LOGIC CONTROLLER.</i>                                                                                                      |     |
| 1.13. C. Moreira, C. Guedes Soares:                                                                                                                                                 | 137 |
| <i>MANOEUVRING SIMULATION BASED ON RECURRENT NEURAL NETWORKS.</i>                                                                                                                   |     |
| 1.14. Jacek Nowicki:                                                                                                                                                                | 149 |
| <i>SHIP TURNING PERFORMANCE FOR LARGE RUDDER DEFLECTION ANGLES.</i>                                                                                                                 |     |

|       |                                                                                                                                                                                  |     |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 1.15. | Andrzej Rak, Nguyen Cong Vinh, Janusz Pomirski,<br>Leszek Morawski:<br><i>SIMULATION AND REAL TIME CONTROL OF SCALE SHIP MODEL IN MATLAB-<br/>SINULINK ENVIRONMENT.</i>          | 158 |
| 1.16. | Heinrich Soeding, Frank Conrad:<br><i>ANALYSIS OF OVERTAKING MANOEUVRES IN A NARROW WATERWAY.</i>                                                                                | 166 |
| 1.17. | Cezary Specht, Mariusz Mięsikowski:<br><i>SOME ASPECT OF USING THE MASTER BRIDGE SIMULATOR<br/>FOR A SHIPHANDLING TRAINING AND FOR AN EXAM OF AIDS<br/>TO NAVIGATION SYSTEM.</i> | 174 |
| 1.18. | K.J. Spyrou, A. Chatzis, I. Tigkas, G. Eleftheriadis:<br><i>LIMITS OF CONTROLLABILITY OF A RO-PAX IN WIND.</i>                                                                   | 184 |
| 1.19. | Hamid Zeraatgar, S. Ehsan Ghazi-Asgar:<br><i>DEGRADATION OF RUDDER PERFORMANCE IN SEA WAVES.</i>                                                                                 | 197 |
| 2.    | STABILITY                                                                                                                                                                        |     |
| 2.1.  | O.P. Anischenko, Yu. I. Nechaev:<br><i>MODELLING OF SHIP DYNAMICS IN FOLLOWING WAVES FOR<br/>VARIOUS STORM SCENARIOS.</i>                                                        | 208 |
| 2.2.  | Jan Bielański:<br><i>PROBABILITY ANALYSIS OF LIFE RAFT CAPSIZING ON ROUGH SEA.</i>                                                                                               | 219 |
