Introduction	1
PART I	
Graptolites and associates	7
Relative proportions of benthos, nekton, and plankton.....	7
General habits of graptolites.....	7
Differentiation between mixed and pure faunas.....	8
Other plankton in pure graptolite shales.....	10
Significance of common characteristics.....	13
Faunas of littoral seaweeds and of sargasso-seas.....	15
Faunas of modern littoral seaweeds.....	15
Relation of plankton and associates to seaweeds.....	16
Modern sargasso-seas	17
Hydroids	19
Bryozoans	19
Worms	19
Mollusks	19
Crustaceans	19
Fishes	19
Adaptation	20
Faunas of modern sargasso-seas versus those of graptolite shales	20
Significance of the comparison.....	21
Paleozoic plankton in general.....	25
Algae	25
Diatoms	25
Foraminifers	26
Sponges	27
Cnidarians	28
Bryozoans	32
Brachiopods	33
Mollusks	34
Worms	36
Crustaceans	36
Conchostraca	38
Trilobites	38
Eurypterids	40
Conodonts	41
Conditions of black shale accumulation.....	43
Significance of deposition.....	43
Miscellaneous observations on black shale origin.....	46
Significant absence of worms.....	48
General conclusions	51
Significance of intercalation of thin limestone bands.....	51

	Page
Survey of Paleozoic black shale faunas.....	53
Cambrian planktonic faunas.....	53
Canadian, Ordovician, and Silurian planktonic faunas.....	55
Devonian, Mississippian, and Pennsylvanian planktonic faunas.....	56
Paleozoic seas and paleogeographic problems.....	63
Theory of continental drift.....	63

PART II

Description of Fossils.....	67
Algae	67
Sponges	68
Cnidarians	72
Brachiopods	77
Worms	86
Mollusks	90
Crustaceans	91

PART III

Bibliography	101
Explanation of plates.....	107
Index	135
