<b>1</b>	<b>Object Recognition</b>	<b>1</b>
1.1	Introduction	1
1.2	Classification Methods	3
1.3	Prior Knowledge and Features Selection	4
1.4	Extraction of Significant Features	6
1.4.1	Feature Space	8
1.4.2	Selection of Significant Features	10
1.5	Interactive Method	17
1.6	Deterministic Method	17
1.6.1	Linear Discriminant Functions	19
1.6.2	Generalized Discriminant Functions	20
1.6.3	Fisher's Linear Discriminant Function	21
1.6.4	Classifier Based on Minimum Distance	28
1.6.5	Nearest-Neighbor Classifier	30
1.6.6	K-means Classifier	30
1.6.7	ISODATA Classifier	34
1.6.8	Fuzzy C-means Classifier	35
1.7	Statistical Method	37
1.7.1	MAP Classifier	37
1.7.2	Maximum Likelihood Classifier—ML	39
1.7.3	Other Decision Criteria	48
1.7.4	Parametric Bayes Classifier	48
1.7.5	Maximum Likelihood Estimation—MLE	49
1.7.6	Estimation of the Distribution Parameters with the Bayes Theorem	52
1.7.7	Comparison Between Bayesian Learning and Maximum Likelihood Estimation	56
1.8	Bayesian Discriminant Functions	57
1.8.1	Classifier Based on Gaussian Probability Density	58
1.8.2	Discriminant Functions for the Gaussian Density	61

1.9	Mixtures of Gaussian—MoG . . . . .	66
1.9.1	Parameters Estimation of the Gaussians Mixture with the Maximum Likelihood—ML . . . . .	68
1.9.2	Parameters Estimation of the Gaussians Mixture with Expectation—Maximization—EM . . . . .	69
1.9.3	EM Theory . . . . .	73
1.9.4	Nonparametric Classifiers . . . . .	76
1.10	Method Based on Neural Networks . . . . .	87
1.10.1	Biological Motivation . . . . .	87
1.10.2	Mathematical Model of the Neural Network . . . . .	89
1.10.3	Perceptron for Classification . . . . .	93
1.10.4	Linear Discriminant Functions and Learning . . . . .	100
1.11	Neural Networks . . . . .	109
1.11.1	Multilayer Perceptron—MLP . . . . .	109
1.11.2	Multilayer Neural Network for Classification . . . . .	111
1.11.3	Backpropagation Algorithm . . . . .	113
1.11.4	Learning Mode with Backpropagation . . . . .	118
1.11.5	Generalization of the MLP Network . . . . .	120
1.11.6	Heuristics to Improve Backpropagation . . . . .	121
1.12	Nonmetric Recognition Methods . . . . .	125
1.13	Decision Tree . . . . .	125
1.13.1	Algorithms for the Construction of Decision Trees . . . . .	127
1.14	ID3 Algorithm . . . . .	129
1.14.1	Entropy as a Measure of Homogeneity of the Samples . . . . .	129
1.14.2	Information Gain . . . . .	131
1.14.3	Other Partitioning Criteria . . . . .	135
1.15	C4.5 Algorithm . . . . .	137
1.15.1	Pruning Decision Tree . . . . .	138
1.15.2	Post-pruning Algorithms . . . . .	140
1.16	CART Algorithm . . . . .	143
1.16.1	Gini Index . . . . .	143
1.16.2	Advantages and Disadvantages of Decision Trees . . . . .	146
1.17	Hierarchical Methods . . . . .	148
1.17.1	Agglomerative Hierarchical Clustering . . . . .	149
1.17.2	Divisive Hierarchical Clustering . . . . .	151
1.17.3	Example of Hierarchical Agglomerative Clustering . . . . .	152
1.18	Syntactic Pattern Recognition Methods . . . . .	154
1.18.1	Formal Grammar . . . . .	156
1.18.2	Language Generation . . . . .	158
1.18.3	Types of Grammars . . . . .	161
1.18.4	Grammars for Pattern Recognition . . . . .	163
1.18.5	Notes on Other Methods of Syntactic Analysis . . . . .	171

1.19	String Recognition Methods . . . . .	172
1.19.1	String Matching . . . . .	172
1.19.2	Boyer–Moore String-Matching Algorithm . . . . .	174
1.19.3	Edit Distance . . . . .	183
1.19.4	String Matching with Error . . . . .	188
1.19.5	String Matching with Special Symbol . . . . .	190
	References . . . . .	191
<b>2</b>	<b>RBF, SOM, Hopfield, and Deep Neural Networks . . . . .</b>	<b>193</b>
2.1	Introduction . . . . .	193
2.2	Cover Theorem on Pattern Separability . . . . .	194
2.3	The Problem of Interpolation . . . . .	196
2.4	Micchelli’s Theorem . . . . .	199
