

## CONTENTS

CHAPTER	PAGE
I. General Atomistics . . . . .	I
II. Isotopy . . . . .	16
III. Atomic Rays and Atomic Problems Solved by Their Means . . . . .	45
IV. Molecular Dipoles . . . . .	58
V. Nuclear Disintegration . . . . .	68
VI. The Fundamental Unit of Electricity . . . . .	98
VII. The Specific Charge of the Electron . . . . .	124
VIII. The Magneton . . . . .	130
IX. Super-Conductivity . . . . .	146
X. Crystal Conduction . . . . .	155
XI. (a) Transformations in the Physical Conditions of Atoms	
(b) Quanta-Excitation of Line Spectra . . . . .	162
XII. The Hydrogen Spectrum . . . . .	184
XIII. The Conditions for Excitation of the Roentgen Spectrum . . . . .	198
XIV. The Continuous X-ray Spectrum . . . . .	214
XV. Spectral Emissions and the Periodic System of Elements . . . . .	234
XVI. Emission and Absorption Phenomena within an Atom on the Basis of Bohr's Theory . . . . .	241
XVII. Resonance and Dispersion: the Compton Effect . . . . .	253
XVIII. The Extension of Our Knowledge of the Electromagnetic Spectra . . . . .	271
XIX. The Photoelectric Effect . . . . .	303
XX. Practical Applications of the Photoelectric Effect . . . . .	311
XXI. Spectralphotometric Problems . . . . .	321
XXII. Infra Red Frequencies of Chemical Radicals in Crystals . . . . .	327

CHAPTER	PAGE
XXIII. Structure Analysis by Means of X-rays . . . . .	349
XXIV. The Physical Basis of Photochemistry . . . . .	362
XXV. Illuminescence in Chemical Reactions . . . . .	372
XXVI. Electron-Affinity . . . . .	381
XXVII. Chemical Reactions by Means of Electronic Impact . . . . .	386
XXVIII. Photochemical Catalysis . . . . .	394
XXIX. Radiation Measurements . . . . .	399
XXX. Atomism and Macrocosm . . . . .	410
