About This Book	xix
Intended Audience	xix
Prerequisites	xix
Getting Started	xx
Course Overview	xxi
Case Studies	xxvi
Using This Book to Prepare for Certification	xxx
The Microsoft Certified Professional Program	xxxv
Technical Support	xxxvi
About the Authors	xxxvii

Part 1 Developing the Framework

Chapter 1 Enterprise Architecture	3
What Is Architecture?	4
Making a Commitment to Architecture-First Design and Practice	5
Challenges of the IT Environment	6
How Enterprise Architecture Responds to IT Challenges	8
Goal of Enterprise Architecture	8
Microsoft Solutions Framework (MSF)	9
MSF Enterprise Architecture Model	10
MSF Team Model for Application Development	10
MSF Process Model for Application Development	10
MSF Risk Management Model	10
MSF Design Process Model	10
MSF Application Model	11
Presentation of MSF in This Book	11
MSF Enterprise Architecture Model	11
Business Perspective	12
Application Perspective	12
Information Perspective	13
Technology Perspective	13
Four Perspectives, One Architecture	14
Alignment of Business and IT Goals	14

Dangers to Avoid During the Enterprise Architecture Process	16
Objectives of the MSF Enterprise Architecture Model	18
Creating an Enterprise Architecture	19
The Myth of an Enterprise-Wide, Project-Deep Architecture	19
Milestone-Driven Process	20
Getting from Current State to Future State	20
Reactive and Proactive Flows	23
Maintaining Focus	24
Enterprise Architecture and Individual Projects	25
Planning While Building and Building While Planning	26
Summary	27
Review	28
Case Study 1 Developing an Enterprise Architecture	29
EA Kickoff	31
Four Models with Perspective	35
Proactive, Reactive, and Versions	37
Getting Started on F-BEAP	40
Chapter 2 Enterprise Applications	43
Features of Enterprise Applications	44
Enterprise Application Architecture	45
Component Reuse	46
Application Size	48
Software Performance	49
Application Scaling	50
Architecture Forms	51
Guiding Software Principles	57
Alignment with Business Goals	58
Product Mindset	58
Architecture-First	59
Design Within Context	59
Different Languages for Different Project Phases	59
Project Success Factors	59
Team Approach	60
Individual Commitment to Project Goal	60
Early Product Demonstrations	60
Risk Management	61
Component-Based Development	61
Change Management	62
Product Versions Based on Customer Priorities and Expectations	62

Flexible, Scalable Framework	62
Enterprise Application Model	63
Designing with the Enterprise Application Model	65
Business Model	68
User Model	69
Logical Model	71
Technology Model	73
Development Model	74
Physical Model	76
MSF Application Model for Development	82
User Services	82
Business Services	82
Data Services	83
Summary	83
Review	84
Chapter 3 Project Teams	85
Team Model vs. Hierarchical Model	86
Project Responsibilities	88
The MSF Development Team Model	90
Product Management	91
Program Management	93
Development	95
Testing	96
User Education	98
Logistics Management	99
Adapting Team Size to Project Size	100
Large-Project Scaling	101
Small-Project Scaling	102
Building Successful Teams	103
Finding Effective Leaders	103
Improving Team Effectiveness	104
Educating the Team	109
Coordinating with Outside Teams	110
Team Management Tools	111
Summary	113
Review	114
Case Study 2 Introducing the RMS Project Team	115
Agenda Overview	116
Team Introductions	119

MSF Revisited	122
RMS Application	123
Review of the MSF Development Team Model	124
Team Roles	125
Chapter 4 Development Process	131
Models for Application Development	132
Waterfall Model	132
Spiral Model	134
Unified Process	136
Workflows	136
Project Phases	140
Iterations	143
MSF Development Process Model	145
Phased Process	146
Milestone-Driven Process	147
Versioned Process	148
The Four MSF Phases and Their Major Milestones	148
Envisioning Phase	148
Planning Phase	150
Developing Phase	152
Stabilizing Phase	154
Importance of All Phases	155
MSF Development Process Model Principles	155
Using Versioned Releases	156
Creating Living Documents	157
Scheduling for an Uncertain Future	158
Managing Tradeoffs	159
Managing Risk	161
Maintaining a Fixed Ship-Date Mindset	162
Breaking Large Projects into Manageable Parts	162
Performing Daily Builds	164
Using Bottom-Up Scheduling	164
Using Versioned Processes	165
Guidelines for Versioned Releases	166
Development Tasks During Other Phases	167
Team Roles in the MSF Development Process Model	170
Artifacts and Deliverables	170
Relationships Between Models	171
Summary	173
Review	174

Case Study 3 Introducing the RMS Project	175
Current State	176
Scheduling Resources	176
Completing Timesheets	179
Recording Time	182
Generating Invoices	185
Business Implications	186
Wrapping Up and Assignments	189
Case Study 4 Determining Goals	191
Review of the MSF Development Process Model	194
Team Roles and Their Phase Responsibilities	195
Iterations Within Versions	197
RMS Project Calendar and Initial Goals	199

Part 2 Designing the Product

Chapter 5 Project Vision	205
Overview of Project Envisioning	206
Why Establish a Vision?	208
Pitfalls	209
Envisioning Process	210
Who Does What During Envisioning?	210
Step #1: Research	211
Step #2: Analysis	213
Step #3: Rationalization	214
Step #4: Implementation	214
Step #5: Validation	214
Communicating	215
Risk Management Process	215
Sources of Risk	216
Types of Risk Management	217
Step #1: Risk Identification	219
Step #2: Risk Analysis	220
Step #3: Risk Action Planning	222
Step #4: Risk Tracking	224
Step #5: Risk Control	225
Vision Approved Milestone and Its Deliverables	226
Vision Document	227
Prototype System	229

Project Structure Document	229
Master Risk Assessment Document	230
Communicating the Vision	230
Expanding the Envisioning Process	231
Summary	232
Review	233
Case Study 5 Envisioning RMS	235
Round One	235
Round Two	241
Client Perspective	249
Wrap-Up	257
Chapter 6 Project Plan	261
Overview of Project Planning	262
Planning Phase and the MSF Design Process	263
Who Does What During Planning?	263
MSF Design Process	264
Overview of the MSF Design Process	265
Conceptual Design	269
Logical Design	277
Physical Design	285
Ongoing Risk Management Process	300
Project Plan Approved Milestone and Its Deliverables	302
Interim Milestones	303
Functional Specification	304
Master Project Plan	307
Master Project Schedule	308
Revised Master Risk Assessment Document	311
Summary	311
Review	312
Case Study 6 Planning RMS	313
Overview of the Planning Phase	316
Overview of the Design Process	318
Conceptual Design	322
Logical Design	324
Development and EA Team Meeting	328
Physical Design	336
Project Plan Approved Milestone	346

Part 3 Developing the Product

Chapter 7 User Service Layer Technologies	353
Determining the User Interface	354
User Service Layer Considerations	354
Selecting a User Service Layer Architecture	360
Basics of Interface Design	362
UI Elements	362
Composition	365
Color and Images	368
Usability	369
User Assistance Model	371
Creating the UI	371
Implementing a Native User Service Layer	371
Implementing a Web-Based User Service Layer	372
Accessing a Native Application	377
Accessing a Web-Based Application	377
Connecting the User and Business Service Layers	380
Making Business Objects Available to Client Computers	380
Accessing Business Objects in Native Applications	381
Accessing Business Objects in Web-Based Applications	382
Accessing Remote Objects Using RDS	383
Summary	385
Review	386
Chapter 8 Business Service Layer Technologies	387
Overview of Business Services	388
Component Object Model (COM)	389
Why COM?	389
COM Programming Model	401
Automation	402
The IDispatch Interface	402
Type Libraries	404
Dispinterfaces	405
Dual Interfaces	406
COM Support in Distributed Environments	406
COM Security	407
Remote Activation and Marshaling	411
Packaging with MTS	412

Designing MTS Packages	414
Activation	415
Shared Resources	415
Fault Isolation	416
Security Isolation	416
Implementing COM in an MTS Environment	417
Basic Windows NT Application Services	419
Windows 2000 COM+ Services	424
Unified Programming Model	424
Primary COM+ Services	426
Summary	427
Review	428
Case Study 7 Introducing COM+	429
Time to Learn	429
Overview of COM+	430
Examples of COM+-Based Application Architecture	434
Expanded Range of Design Choices	435
Queued Components	435
Loosely Coupled Events (LCE)	436
In-Memory Database (IMDB)	437
Transactional Shared Property Manager	437
Object Pooling	438
Dynamic Load Balancing	439
Application Design Considerations	440
Objects in the COM+ Environment	443
Connecting Components	448
Chapter 9 Data Service Layer Technologies	453
What Is the Data Service Layer?	454
Universal Storage	454
Application Programming Interfaces (APIs)	454
Universal Data Access	455
UDA-Based Access Components	456
Data Modeling	456
Identifying Data	457
Defining Data	458
Ensuring Data Integrity	461
Defining Operational Processes	466
Choosing a Data Storage Technology	468

Microsoft Data Access Components (MDAC)	468
Open Database Connectivity (ODBC)	470
OLE DB	471
ActiveX Data Objects (ADO)	474
Remote Data Service (RDS)	481
Choosing the Right Data Access Technology	484
When to Use ADO	484
When to Use RDO	484
When to Use ODBCDirect	485
When to Use DAO	485
When to Use ODBC	485
Choosing a Data Access Strategy	486
Accessing Host-Based Data	488
ADO for the AS/400 and VSAM	488
DDM and OLE DB	489
COMTI and Mainframe Data Integration	492
COMTI Makes It Easier to Extend Transactions	493
Differences Between Windows and Mainframe Terminology	494
DCOM Connector for SAP	495
COM+ In-Memory Database (IMDB)	497
Summary	499
Review	500
Chapter 10 Testing and the Production Channel	501
Managing the Development Environment	502
Production Channel	503
Change Control Process	505
Sizing the Production Channel	507
Testing Enterprise Applications	508
Component-Level Testing	509
Local Integration Testing	510
Debugging Tools	510
Data Access Testing	511
Integration Testing	511
Performance Validation	512
Defining Performance Requirements	513
Defining Metrics and Goals	514
Measuring Performance	515
Defining Performance Tests	515

Determining Baseline Performance	516
Identifying and Eliminating Bottlenecks	516
Common Bottlenecks	520
Scaling the Production Environment	522
Configuration #1: Single Node	523
Configuration #2: IIS on a Separate Node	523
Configuration #3: SQL Server on a Separate Node	524
Configuration #4: Each Database on a Separate Node	525
Configuration #5: Partitioned Database	526
Configuration #6: Partitioned Application	527
Fault Tolerance	528
Bug Management	529
Tracking	529
Classification	530
Resolution	531
Summary	531
Review	532
Case Study 8 Testing RMS	533
What's Needed and Why	535
Chapter 11 Application Security	539
Authentication Security	540
Windows NT Authentication	540
Kerberos Authentication	542
Web-Based Authentication	543
SQL Server Authentication	547
Encryption	549
Security-Related Protocols	549
Secure Sockets Layer (SSL)	550
SSL, IIS 4.0, and Microsoft Proxy Server	551
Server Gated Cryptography	552
CryptoAPI	554
Access Security	554
Windows NT Access Security	554
User Access Control	556
File Protection	558
Distributed Component Protection	559
Operating System Services Protection	560
Windows NT Registry Security	560
ASP and HTML Page Security	561

MTS Application and Data Security	562
SQL Server Access Permissions	564
Auditing	565
Log Files	566
Event Logs	566
Distributed Environments	567
Summary	569
Review	570
Chapter 12 Development Deliverables	571
Overview of the Developing Phase	572
Planning Feeds the Developing Phase Deliverable	574
Development Process	574
Who Does What During Development?	575
Step #1: Analysis and Rationalization	576
Step #2: Implementation	576
Step #3: Validation	577
Ongoing Risk Management Process	577
Scope Complete Milestone and Its Deliverables	578
Interim Milestones	579
Revised Functional Specification	582
Revised Master Project Plan	584
Revised Master Project Schedule	584
Revised Master Risk Assessment Document	585
Source Code and Executables	585
User Performance and Support Elements	586
Testing Elements	587
Summary	591
Review	592
Case Study 9 Developing RMS	593
Product Management Report	593
Program Management Report	595
User Education Report	596
Logistics Management Report	597
Development Report	597
Testing Report	599
Problem Solving	602
Regression Testing	604
Scope Complete Milestone	607

Part 4 Shipping the Product

Chapter 13 Product Stabilization	617
Overview of Stabilization	618
Stabilization Process	619
Who Does What During Stabilization?	619
Interim Milestones	620
Milestone #1: Interim Releases as Bugs Converge	620
Milestone #2: Zero-Bug Release	621
Milestone #3: Release Candidates	621
Milestone #4: Final Product Release	621
Ongoing Risk Management Process	621
Release Milestone and Its Deliverables	623
Release Notes	623
User and Support Performance Artifacts	623
Testing Results	625
Project Archives	625
Product Deployment	625
Planning the Product Deployment	626
Deployment Timeline	628
Software, Data Setup, and Conversion	629
Interim Product Release Deployment	630
Deployment Methods	631
Production Support	634
Data Migration and Coexistence Issues	634
Summary	635
Review	636
Chapter 14 Project Review	637
Case for Project Review	638
Capability Maturity Models	640
Project Review Considerations	642
Preparation for a Project Review Meeting	644
Organizing a Project Review Team	645
Capturing Feedback	647
Accountability	647
Summary	647
Review	648

Case Study 10 Shipping RMS	649
Are We Ready for the Users?	650
A Fresh Look	652
User Feedback	655
Reviewing the Project	657
Appendix Review Questions and Answers	661
Glossary	693
Bibliography	705
Index	707
