

TABLE OF CONTENTS

Introduction	9
THE NATURE AND PROPERTIES OF A RELATIONAL DATA MODEL	
1.1. The evolution of methods of collecting data in computer systems.....	15
1.2. Relational data model.....	18
1.3. Database-related concepts	21
1.3.1. Data versus information.....	22
1.3.2. Data structures	23
1.3.3. Relationships	42
1.3.4. Issues of integrity design and implementation	56
1.4. Database management systems	58
DATABASE DESIGN	63
2.1. Entity relationship diagrams.....	63
2.2. Design of information systems and their constituent databases	65
2.3. Specific design issues	74
2.3.1. Recursive relationships.....	74
2.3.2. Connection traps: the fan trap and the chasm trap....	77
2.4. Practical example: from identification of requirements to the logical project of the database.....	81
SQL QUERY LANGUAGE	
3.1. The genesis and development of SQL	93
3.2. Query classification	94
3.3. Functional queries	96
3.3.1. Creating databases and tables	96
3.3.2. Deleting databases and tables	103

3.3.3.	Adding records.....	103
3.3.4.	Modifying data	104
3.3.5.	Deleting records.....	105
3.3.6.	Functional queries – an example of application.....	105
3.4.	Select queries.....	110
3.4.1.	Selecting the entire table	112
3.4.2.	Projection.....	112
3.4.3.	Removing duplicates	113
3.4.4.	Sorting the result table.....	113
3.4.5.	Record selection. Creating the conditions for selection	114
3.4.6.	Joins	117
3.4.7.	Inner joins in SQL	123
3.4.8.	Joining a large number of tables.....	125
3.4.9.	Self-joins.....	127
3.4.10.	Outer joins in SQL	129
3.4.11.	Subqueries.....	130
3.4.12.	Unions.....	133
3.4.13.	The difference operation and negative queries	135
3.4.14.	Correlated subqueries	136
3.4.15.	Calculated fields	138
3.4.16.	Grouping and aggregate functions	138
WEB DEVELOPMENT		
4.1.	Technologies used to create Webpages.....	145
4.2.	HTML basics.....	153
4.2.1.	Selected tags and parameters of the header section	154
4.2.2.	Selected tags and parameters of the <i>body</i> section	155
4.3.	Cascading style sheets.....	173
4.3.1.	Selectors, properties and values	174

4.3.2.	Descendant selectors	177
4.3.3.	Classes	178
4.3.4.	Pseudo-classes	179
4.3.5.	Identifiers	181
4.3.6.	Attributes relating to all tags	182
4.3.7.	Practical examples of using CSS.....	182
4.4.	JavaScript.....	185
4.4.1.	Including external JavaScript files in HTML. Function definition syntax	186
4.4.2.	Selected elements of JavaScript	187
4.4.3.	Array variables.....	188
4.4.4.	Regular expressions	189
4.4.5.	Dialog boxes	193
4.4.6.	Selected methods for data validation.....	193
4.4.7.	Events	196
4.4.8.	Properties of variables and form fields	197
4.4.9.	Objects and methods for performing operations on dates	198
4.4.10.	Calling functions for data validation in forms	199
4.4.11.	jQuery framework	201
4.5.	PHP basics	207
4.5.1.	Selected rules for writing scripts in PHP.....	208
4.5.2.	Selected PHP functions for working with PostgreSQL databases.....	214
4.5.3.	An example of an application using forms and communication with the database	220
4.5.4.	Transferring files from the local disk to the server ...	225
4.5.5.	Automatic sending of e-mails.....	228
4.5.6.	Transforming the data retrieved from the database to the XML format	229
	Bibliography	235
