

Contents

1.	Marek Bednarczyk, Jerzy Pырchla, Andrzej Stateczny Location of an accident at sea in the SAR system - an attempt at formalizing the problem	5
2.	Wiesław Galor The application of risk as a measure of navigational safety assessment	17
3.	Lucjan Gućma Width of a ship's swept path – a safe manoeuvre criterion defined with the tolerance intervals concept	29
4.	Stanisław Gućma Mathematical model of effects of vessel's collision with sea area bottom	41
5.	Jarosław Guźewicz A statistical analysis of swept paths of a ship approaching the Dolna Odra power plant berth verified by a mathematical model	55
6.	Wiesław Juszkiewicz, Andrzej Stateczny General regression neural networks for target movement estimation ..	65
7.	Jacek Łubczonek A comparison of selected methods of surface modelling: an example of seabed surface	73
8.	Wojciech Piśczek A model of radio detection and ranging	89
9.	Wojciech Piśczek A model of safe ferry traffic at the crossing of a fairway and ferry route	101
10.	Jędrzej Porada An algorithm of steering a ship during active backing in a limited water	113
11.	Jędrzej Porada Using a twin-screw propelling and steering complex in manoeuvring practice	123
12.	Tomasz Praczyk, Andrzej Stateczny Application of radial networks for recognising vessels through the identification of their radio stations	133
13.	Paweł Zalewski Fast time simulation model of ship movement based on path prediction	147
