

Preface 2014	xvii
Preface 2008	xix
Introduction, 2nd Edition	xxi
Introduction, 1st Edition	xxiii
Acronyms	xxv
Notes to the Reader	xxix
About the Author	xxxi

Aircraft Applications—Propulsion Requirements	31
Shaft-Powered Aircraft—Turboprops and Turboshafts	33
Thrust Propelled Aircraft—Turbofans, Turbojets, and Ramjets	35
Auxiliary Power Units (APUs)	39

## 1. Gas Turbines: An Introduction and Applications

Gas Turbines on Land	1
Direct Drive and Mechanical Drive Applications Versatility with Land-Based Gas Turbines	2
Aeroengine Gas Turbines	6
Relationships between Pressure, Volume, and Temperature	6
Changes in Velocity and Pressure	6
Airflow	7
Gas Turbines at Sea	10
Gas Turbines: Details of Individual Applications	10
Major Classes of Power Generation Application	11
Grid System	12
Standby Generators	12
Major Shaft Power Producing Systems	13
Small-Scale Combined Heat and Power—CHP	14
Large-Scale CHP	15
Applications that Supply Solely to a Grid System	19
Closed Cycles	20
Industrial Mechanical Drive Applications	22
The Gas and Oil Pipeline System	22
Engine Requirements	22
Automotive Applications	22
Marine Applications	24
CODAG, CODOG, COGAG, and CODLAG Propulsion Systems	27
Hovercraft	27

## 2. Historical Development of the Gas Turbine

Early History of the Gas Turbines	41
Land-Based Gas Turbine Development Perspective	41
Aircraft Engine Development: A US Perspective	42
Principles of Jet Propulsion	44
Methods of Jet Propulsion	45
The Gas Turbine Global Fleet: Model Designation and Production Prognosis as of 2013–2022	49
Appendix 2A-1: Gas Turbine Engines Powering Aircraft: Aircraft Engine Production	49
Appendix 2A-2: Electrical Generation/Mechanical Drive/Marine Power Turbine Engines	55
Appendix 2A-3: APU Engine Production	56
Appendix 2A-4: Missile/Drone/RPV Engine Production	56
Appendix 2A-5: Microturbines for Electrical Generation	56
Gas Turbine Global Fleet: Model Designation and Production as of May 2006	56
Appendix 2B-1: Gas Turbine Engines Powering Aircraft	56
Appendix 2B-2: Gas Turbines for Electrical Generation, Mechanical Drive, and Marine Power	77
Appendix 2B-3: Gas Turbines for APU/GPU Units	84
Appendix 2B-4: Gas Turbines Powering Missiles/Drones/RPV/UAV	88

Appendix 2B-5: Gas Turbines Powering On-Land/Surface Vehicles	92	Case Study 1: An End-User/EPC Contractor's Experience with Some of the OEMs' Latest Gas Turbine Models in Power Generation Service	119
Appendix 2B-6: Gas Turbines Powering Microturbines for Electrical Generation	92	Low Load Flexibility	124
<b>3. Gas Turbine Configurations and Heat Cycles</b>		Case Study 2: An OEM's Development of a Gas Turbine The SGT6-5000F (Formerly Known as W501F) Engine	125
Gas Turbine Configurations	94	Market Drivers for Low Load	126
Turbojet with Afterburner and Convergent-Divergent Nozzle	96	Operational Flexibility	126
Separate Jets Turbofan	96	Design and Implementation	126
Mixed Turbofan with Afterburner	96	Results	127
Ramjet	96	Validation and Field-Follow	127
Simple-Cycle Single-Spool Shaft-Power Engine	96	Case Study 3: Operational Experience with Large Advanced Gas Turbines in Variable Load Conditions	129
Simple-Cycle Free-Power Turbine Engine	96	Refinery Case	130
Gas Generator	96	Captive Power Plant Concept	130
Recuperated Engine	97	Key CPP Design Criteria	131
Intercooled Shaft-Power Engine	98	Cycle Selection	131
Intercooled Recuperator Shaft-Power Engine	98	Power Demand	131
Closed Cycle	98	Steam Demand	131
Combined Cycle	98	Reliability and Redundancy	132
Combined Heat and Power	98	Fuel System Design	132
Aeroderivative and Heavyweight Gas Turbines	99	Auxiliary Equipment Design	133
Gas Turbine Cycles: Summarized Theory and Economics	101	Considerations	133
Power Generation Gas Turbine, Simple and Combined Cycles	101	Off-Design Case Operation	133
Combined Cycles and Other GT Cycle Modifications	104	Unique Control Systems	133
Cycle Modifications	104	Transient Behavior	133
Combined Cycles	106	Cogeneration Case	133
STAG CC	106	Supplementary Firing	134
CC with Multipressure Steam	106	Low-Pressure Turbine Sizing	134
Combined-Cycle Economics	108	Reliability and Availability	134
Combined-Cycle Module Flexibility	109	Plant Configuration	134
Steam-Only (Coal-Fired) Power Plants	111	Aluminum Smelter Case	134
OEM Modular Strategy	111	N-2 Criteria	134
Fuels for Combined Cycles	113	Load Variations	135
Factors that Affect Costs per Fired Hour	114	Equipment Selection Criteria	135
Trends in Global Combined-Cycle Installations	114	Appendix 3A: Steam Turbine Power Plant Theory Applicable to Combined Cycle and 'Solo' (as Competition to Gas Turbine Cycle) Operation	136
Trends in the Power Generation Market	116	Rankine Cycle	136
Technology, Performance, Environment, and Demand Trends	117	Reheaters	136
		Regeneration	137
		Feedwater Heating	139
		Efficiency and Heat Rate of Power Plants	139
		Cogeneration	139
		Types of Cogeneration	139
		Steam Turbine Basic Components and Main Systems	139

Single-Cylinder Reheat Turbines	150	Construction	237
Steam Turbine Control Systems	152	Materials	239
Lubrication System	153	Case Study 5: Development of a 60cps "J" Technology Turbine	242
Steam Turbine Governing System	155	Case Study 6: Development and Operation Experience of Mitsubishi 50 Hz Large-Frame (M701F) Gas Turbines	245
Steam Turbine Operation	156	Case Study 7: Development of an "H" Technology Turbine	249
Turbine Trip (o/s)	159		
Supercritical Systems: Targeting 700+°C Steam Temperature	162		
Case Study 3A-1: Advanced Design of Mitsubishi Large Steam Turbines	165		
Ultra Supercritical Steam (USC ST) Turbines	166		
Case Study 3A-2: One OEM's Supercritical ST Product Range with Specific Reference to the 800 MW Trianel Power Project in Lünen	168		
Turbine-Generator	169		
US DOE Work on USC ST Materials	170		
Alloys	170		
<b>4. Gas Turbine Major Components and Modules</b>		<b>5. Cooling and Load Bearing Systems</b>	
Economics Dictates Design	173	Internal Air System	256
Gas Turbine Engine Modules	177	Cooling	256
Rotor Support Structures	177	Turbine Cooling	256
Fan Module Basics	180	Bearing Chamber Cooling	258
Main Modules in a Gas Turbine (Air, Land, or Sea Applications)	188	Accessory Cooling	259
Compressors	188	Sealing	260
Combustors	197	Labyrinth Seals	260
Low NO <sub>x</sub> Combustors	210	Ring Seals	260
Legislative Trends	213	Hydraulic Seals	260
Case Study 1: Application of a Dry Low Emissions (DLE) gas turbine fuel control system (Model Designation Trent)	214	Carbon Seals	260
Case Study 2: Dry Low Emissions (DLE) Combustor System Application (Thyphon)	217	Brush Seals	260
Dual DLE Burner	218	Hot Gas Ingestion	260
Commercial Operations Post Retrofit	219	Control of Bearing Loads	261
Case Study 3: Another DLE Application (Former Model Designation <i>Tempest</i> )	224	Aircraft Services (for Aircraft Engines)	262
Case Study 4: DLE Applications in Gas Turbines (30 MW to 180 MW)	228	Lubrication	262
Turbines	233	Lubricating Systems	262
Energy Transfer from Gas Flow to Turbine	236	Pressure Relief Valve System	262
		Full Flow System	263
		Total Loss (Expendable) System	264
		Oil System Components	264
		Oil System Differences for Marine Applications	272
		Module-Mounted Components	272
		Power Turbine (Mechanical Drive) Oil System	273
		Lubricating Oils	273
		An Operator's Perspective on Turbine Oil Selection	274
		Characteristics of Turbine Oil and Applications	274
		Steam Turbines	274
		Gas Turbines	275
		Aeroderivative Gas Turbines	275
		Turbine Oil Procurement	
		Standard	275
		Lube Oil System Flushing	276
		Development Case study: Oil-Free Bearings	276

## 6. Inlets, Exhausts, and Noise Suppression

Gas Turbine Inlet Air Filtration	280	Electronic Engine Control	332
Inlet Air Filters for the Tropical Environment	280	Low-Pressure Fuel System	333
Design Problems Experienced	281	Fuel Pumps	333
Offshore Environment Original Design Data	282	Fuel Heating	337
Initial Filter Designs	283	Effect of a Change of Fuel	337
Actual Offshore Environment	283	Gas Turbine Fuels	338
Offshore Application Design Problems Encountered	284	Fuel and Fuel Oil Properties	339
Case Study 1: A Test Case of Two- vs. Three-Phase Filtration	285	Combustion Process, Fuel Properties, and Gas Turbine Fuel Types	339
A Comparison of Two- and Three-Stage Filter Systems	286	Database of Key Fuel Properties for Performance Calculations	341
Gas Turbine Exhausts	290	CP of Combustion Products	344
Exhaust Gas Flow	292	Synthesis Exchange Rates for Primary Fuel Types	344
Construction and Materials	294	Oil Types and Database of Key Properties	344
Gas Turbine Noise Suppression	295	Formulae	344
Methods of Suppressing Noise	297	Unconventional Fuels	345
Construction and Materials	299	Emerging Fuel Trends/New Fuel Technologies	345
Nonaeroengine (Land-Based) Gas Turbine Noise Suppression	300	Economic Conditions that Affect Fuel Strategy	346
Applications of Sound Intensity Measurements to Gas Turbine Engineering	300	Impacts on Design and Manufacturing in Developing Countries	347
Sound Fundamental Concepts	300	Upgrading Fossil-Fueled Power Plant Physical Properties that Affect Fuel Selection and System Design	349
Sound Pressure, Sound Intensity, and Sound Power	300	Global Experience with IGCC	353
Reference Levels	301	Liquid Fuels	353
The Relationship between Sound Pressure Level and Sound Intensity Level	302	Fuel Specifications	354
Instrumentation	302	Mechanical System Functions	354
Guidelines and Standards in Sound Intensity Measurements and Measurement Technique	303	Operation and Maintenance Issues with Residual and Other Heavy Fuels	354
Some Advantages and Limitations in Sound Intensity Measurements	304	Technology, Performance, and Design Trends	356
Measuring Tonal Noise Sources	306	OEM Design Requirements as They Relate to Integrated Gasification Combined-Cycle Plants	356
Case Study 2: The Use of Sound Intensity Measurement	306	Fuel Treatment Hardware	360
Case Study 3: Comparison of Noise on Two Nominally Identical Production Machines	307	Classical Heavy Fuel Oil (HFO)	361
Acoustic Design of Lightweight Gas Turbine Enclosures	309	Low-Grade Heavy Fuel Oil (HFO)	362
		Fuel Treatment	362
		Elements of the Fuel Treatment System for Ash-Forming Fuels	363
		Treatment of Light Crude Oil	373
		Treatment of Residual Fuel	378
		Case Study 1: A Residual "Bunker" Fuel Case Study (Metro Manila, Limay Bataan Combined Cycle)	380
		Operating Experiences	382
		Gas Turbine Operation	385
		HRSG Operation	386
		Plant Performance and Availability	388
		Case Study 2: Autoignition Characteristics of Gaseous Fuels at Representative Gas Turbine Conditions	388

## 7. Gas Turbine Fuel Systems and Fuels

Basic Gas Turbine Fuel System	318
Manual and Automatic Control	319
Fuel Control Systems	319

Measurements of Autoignition Delay Time	389	Ice Protection Systems	426
Case Study 3: From Concept to Commercial Operation—Tri-Fuel Injector Used for LPG and Naphtha Applications	394	Hot Air System	429
Design Objectives	394	Electrical System	430
System Overview	396	Fire Protection Systems	431
Tri-Fuel Injector Design	396	Prevention of Engine Fire Ignition	432
Operating Philosophy	399	External Cooling and Ventilation	432
Commercial LPG Operation	399	Fire Detection	432
Naphtha Development Testing	400	Fire Containment	434
Case Study 4: Multi-Fuel Concept of the Siemens 3A-Gas Turbine Series	401	Fire Extinguishing	434
Liquid Multi-Fuel System	401	Engine Overheat Detection	435
Gas Turbine Controller	404	Water Injection Systems	435
Fuel Changeover	404	Compressor Inlet Injection	436
Case Study 5: Use of Blast Furnace Gas to Fuel 300 MW CC Plant	405	Combustion Chamber Injection	436
Features of the Plant	406	Systems Unique to Aircraft Engine Applications	437
Main Specifications of Major Equipment	406	Thrust Reversal	437
Measures against Low Ambient Temperatures	406	Principles of Operation	437
Automatic Control System	406	Clamshell Door System	438
Case Study 6: Biodiesel as an Alternative Fuel in Siemens Dle Combustors - Atmospheric and High Pressure Rig Testing	409	Bucket Target System	439
Siemens DLE Combustion System	409	Cold Stream Reverser System	439
Capability of the DLE System for Fuel Flexibility	410	Turbo-Propeller Reverse Pitch System	439
		Construction and Materials	439
<b>8. Accessory Systems</b>		Afterburning	441
Accessory Drives	414	Operation of Afterburning	444
Gearboxes and Drives	414	Construction	444
Internal Gearbox	414	Burners	444
Radial Driveshaft	416	Jet Pipe	446
Direct Drive	416	Propelling Nozzle	446
Gear Train Drive	417	Control System	447
Intermediate Gearbox	417	Thrust Increase	448
External Gearbox	417	Fuel Consumption	450
Auxiliary Gearbox	418	Vertical/Short Takeoff and Landing Methods of Providing Powered Lift	451
Construction and Materials	418	Lift/Propulsion Engines	453
Gears	418	Lift Engines	455
Gearbox Sealing	419	Remote Lift Systems	456
Materials	419	Swiveling Engines	457
Starting and Ignition Systems	420	Bleed Air for STOL	457
Methods of Starting	420	Lift Thrust Augmentation	457
Electric	420	Special Engine Ratings	457
Cartridge	420	Lift Burning Systems	458
Iso-Propyl-Nitrate	420	Aircraft Control	458
Air	421	Reaction Controls	458
Gas Turbine	421	Differential Engine Throttling	459
Hydraulic	423	Automatic Control Systems	459
Ignition	423	Thrust Distribution	460
Relighting	426	Distribution of the Thrust Forces	460
		Method of Calculating the Thrust Forces	461
		Calculating the Thrust of the Engine	461
		Systems Unique to Land or Marine Applications	465
		Generators	465
		Degrees of Protection and Methods of Cooling	466
		Configuration/Arrangement Forms	466

Excitation System	466	Principles and Functions of a Control System	487
Accessories	466	Components of a Control System	488
Technical Data on Typical Available Generators	466	Aeroengine Control Systems	490
Design Description	467	Civil Aircraft Engine Controls	490
Cooling Systems	470	Fuel Metering Unit (FMU)	492
Brushless Excitation	472	Defense Applications	497
Surface Treatment	472	Helicopter Systems	497
Static Excitation	472	Typical Aircraft Engine C&I System	
Inspection and Testing	473	Hardware	498
Control and Protection	473	Main Control Functions	498
Operating Characteristics	474	Basic Instrumentation Hardware	498
Noise Reduction	475	Synchronizing and Synchrophasing	508
Online Cleaning Systems	475	Marine C&I Systems	508
Methods of Cleaning Fouled Gas Turbine Compressors	475	Typical C&I System, Land-Based (Power Generation)	508
Advantages and Disadvantages of Offline Compressor Washing	476	Instrumentation	508
Typical Causes of Gas Turbine Compressor Fouling	477	Transducers	509
Advantages and Disadvantages of Online Chemical Cleaning of Compressor	477	Typical (Non-aeroengine) Controls	509
Other Online Compressor Cleaning Methods	478	Significant Advances in Controls Instrumentation and Diagnostics Technology	513
Advantages and Disadvantages of Abrasive Compressor Cleaning	478	Optical Pyrometry	513
Advantages and Disadvantages of Cleaning Compressors with Plain Water	478	Pyrometer System	518
Expansion Joints	479	Case Study 1: A Survey of New Technologies Used by Siemens Energy for the Monitoring and Diagnosis of a Global Fleet of Power Generation Systems	522
Types of Expansion Joints	480	Fiber Optic Vibration Monitor	522
Unrestrained Assemblies	480	FOVM Sensor	522
Externally Pressurized Expansion Joints	480	Blade Vibration Monitoring System	523
Restrained Assemblies	480	Radio Frequency Monitor	523
Accessories for Special Service	481	Case Study 2: Pulsation Analysis: New Techniques and Their Limitations	524
Bellows Manufacture	482	Prevention of Catastrophic Failures	524
Shipping	482	Increased Reliability, Availability, and Equipment Performance—User Requirements	524
Shipping Bars	482	Development of the Monitoring System	524
Installation Guidelines	483	Installation of the Initial Systems	526
Unrestrained Expansion Joints	483	Case Study 3: Performance and C&I System Verification with Modeling	528
Restrained Expansion Joints	483	WR-21 Engine Cycle	528
Specific Applications	484	Rolls Royce's Corporate Analysis Method	528
<b>9. Controls, Instrumentation, and Diagnostics (CID)</b>		<b>10. Performance, Performance Testing, and Performance Optimization</b>	
System Scope and Selection for Gas Turbines	486	Performance	534
Which Parameters on What Applications	486	Performance Theory Summary	535
Basic Controls and Instrumentation (C&I) on GT Systems	487		

Performance Testing New Gas Turbine Engines: Parameters and Calculations	546	Case Study 1: The Capture, Storage, and Utilization of Carbon Dioxide by Statoil	648
Analysis/Calculations on the Effects of Water as a Vapor, Liquid, or Solid	571	Climate Change	648
The Thermodynamics of Water	581	Statoil and Climate Policy	648
Case Study 1: The W501G Testing and Validation in the Siemens Westinghouse Advanced Turbine Systems Program	586	Research History in Brief	649
Performance Optimization Case Histories and Discussion	593	Awards	649
Case Study 2: A Systems Approach to Hot Section Component Life Management	594	Options	649
Oxidation and Hot Corrosion	594	Sleipner West Gas Field	650
Microstructural Degradation	594	Snøhvit and In Salah Projects	654
Mechanical Testing	594	Power Plants	655
Performance Engineering Approach	597	Carbon Dioxide Utilization	656
Case Study 3: Strategies for Integration of Advanced Gas and Steam Turbines in Power Generation Applications	598	Statoil Mongstad Fact Sheet: Carbon Dioxide Capture and Storage Project	658
Case Study 4: A Study on the Life Cycle Impact of Steam Injection	605	Appendix 11A	659
Case Study 5: Augmentation of Gas Turbine Power Output by Steam Injection	608	Emissions Legislation	659
Gas Turbine with Sequential Combustion	609		
Partial STIG Cycle	611		
Case Study 6: Integrating Gas Turbines in Power and Cogeneration Applications	619		
Case Study 7: An Integrated Combined-Cycle Plant Design that Provides Fast Start Capability at Base-Load	624		
Case Study 8: Challenges in the Design of High Load Cycling Operation for Combined-Cycle Power Plants	627		
<b>11. Gaseous Emissions and the Environment</b>		<b>12. Maintenance, Repair, and Overhaul</b>	
Gaseous Emissions	645	Operating and Maintenance Strategies	670
Effects of Emissions on Aircraft		Reactive Strategy	670
Gas Turbine Engines	639	Predictive Strategy	670
Emissions from Coal as a Fuel	641	Preventive Strategy	670
Carbon Dioxide Sequestration	642	Evolving Strategy in Land Versus Air Versus Marine Applications	670
Post-Combustion Capture	644	Maintenance	671
Post-Combustion Chilled Ammonia	644	On-Wing Maintenance	672
Pre-Combustion Capture IGCC	645	Condition Monitoring	672
Oxy-Combustion	645	Maintenance Precautions	674
Post-Capture CO <sub>2</sub> Treatment	645	Troubleshooting	674
CO <sub>2</sub> Compression Issues	645	Maintenance Information Systems	678
Other Methods of CO <sub>2</sub> Sequestration	646	Audits of and Retrofits with GT	
Brief Description of Technologies	646	Components and Systems	679
		Aims of an Audit	680
		Tasks	681
		Audit Planning	681
		General Audit Procedures	682
		Changing Legislative Requirements	683
		Retrofits Aimed at Operational Optimization	684
		Case Study 1: Brent Platform	
		Retrofits for Extended Life	684
		Case Study 2: Flotta Terminal	686
		Case Study 3: Forties Platform	
		Retrofits	687
		Case Study 4: Al-Ain Flameout	
		Problems	687
		Performance Analysis	688
		Case Study 5: Extending TBOs of Gas Turbines by Preventing Premature Turbine Disc Failure in a GE Frame 5 (Old Model)	690

Case Study 6: Power Addition for GT in Cogeneration Service Using Steam Injection	690
Case Study 7: Glass Bead Peening	697
Case Study 8: First-Stage Turbine Blades	697
Assessing Audit Findings	698
The Basics	698
Eliminate Obvious Problems	698
Fouled Gas Turbine Compressor	698
Risk and Weighting Factors Method	699
Questions to List Potential Factors and Causes	699
What can be Learned for Future Installations?	699
Overhaul/Repair Scope	701
Major Repair and Overhaul Case Studies	708
Case Study 9: Metallurgical Analysis Used in Gas Turbine Maintenance and Extending TBOs	709
Case Study 10: Evolution of IGT "F" Class Repair Technology	720
Case Study 11: Liburdi Powder Metallurgy, Applications for Manufacture and Repair of Gas Turbine Components	730
Case Study 12: Hot-Gas-Path Life Extension Options for the V94.2 Gas Turbine	737
Case Study 13: Assessing Performance Degradation in Gas Turbines for Power Applications	742
Case Study 14: Remaining Life Assessment of Power Turbine Disks	746

### 13. Installation

Installation of Aircraft Engines	749
Power Plant Location	749
Air Intakes	749
Engine and Jet Pipe Mountings	752
Accessories	753
Cowlings	753
Civil Nacelles	754
Military Fuselage Intakes	757
Stealth Aircraft	759
Flying Test Beds	761
Energy, (Power Generation), and Marine Installations	762
Externals and the Engine Build Unit	763
Installation of Land-Based and Marine Engines	764

### 14. The Business of Gas Turbines

Contemporary Business Climate	767
Culture	769
Repair and Overhaul Shop Culture	769
End User or Operator Culture	771
Money Makes Attitudes	772
OEM (Manufacturer) Culture	772
The Ruggedness School	772
Market Entry Monopoly	773
Conglomerate and Joint Venture Cultures	773
Educators and Training	774
Integration with Environmental Technology Culture	774
Risk	775
Selection and Specification Process for Gas Turbines and Gas Turbine Systems	775
Risk Factors and Their Mitigation in Gas Turbine Design and Operation	775
Manufacturers' (OEMs') Guarantees	776
Supply of New Machines	776
Effect of Design Factors	777
Life Cycle Assessment	777
Performance Assessment	778
"Shifting Target" Data during Project Development, Negotiation, and New Model Introduction	780
Risk in Negotiating IPP Projects	780
International Negotiation	781
Market Assessment Risk	781
Plant Siting	782
Design Development and Operational Assessment by Both OEMs and End Users	782
Case Study 1: Enhancing Reliability and Reducing O&M Expenditures in Advanced Combined Cycle Gas Turbine Power Plants	782
Design Decisions Influencing Reliability	783
Case Study 2: How Close Is the Measured Performance to the True Output and Heat Rate? The Proof Is in the Testing!	787
ASME Performance Test Codes	787
Combined-Cycle Guaranteed Values	787
Test Significance	788
Measurement Uncertainty and Test Tolerance	789
Correction Curves	789
Degradation Curves	789
Inlet Cooling Devices	789

Case Study 3: Comparative Evaluation of Power Plants with Regard to Technical, Ecological and Economical Aspects	792
Available Technologies	792
Efficiencies	795
Emissions	795
Power Plant Investment	796
Economic Evaluation	797

## 15. Manufacturing, Materials, and Metallurgy

Basic Manufacture	803
Manufacturing Strategy	803
Forging	805
Casting	805
Fabrication	807
Welding	808
Electro-Chemical Machining (E.C.M.)	809
Electro-Discharge Machining (E.D.M.)	811
Composite Materials and Sandwich Casings	811
Inspection	812
Smart Materials	813
Reverse Engineering	813
Optimization of Component Manufacture by OEMs	814
Optimizing Gas Turbines with Manufacturing Technology	814
Case Study 1: Upgrading the Core Engine	814
Design Features	815
Raising Serviceability Ceilings	820
Spray Forming	822
Casing Fabrication	823
Microstructure of Processed and Heat Treated RS5	823
Creep Resistance Advancements	824
Creep Resistance of Materials for Microturbine Recuperators	824
Case Study 2: Ceramic Vanes for a Model 501-K Industrial Turbine Demonstration	824
Ceramic Vane/Mount Design and Analyses	825
Ceramic Vane Thermal Shock Tests	826
Ceramic Vane/Mount Proof Tests	826
Ceramic Vane/Metal Mount Demonstration	827
Analyses of Ceramic Vanes	827

Case Study 3: Assessment of Ceramic and Metal Media Filters in Advanced Power Systems	830
Ceramic Filter Elements—Summary	831
Comments	831
Metal Filter Media Development	833

## 16. Microturbines, Fuel Cells, and Hybrid Systems

Microturbines	836
Fuel Cells	836
Power Generation Tubular SOFC Technology	837
Hybrids	837
Applications and Case Studies	840
Case Study 1: Microbial Fuel Cells (MFC)	840
Case Study 2: PEM Fuel Cells (FCs) on Naval Submarines	843
Case Study 3: Microturbine in a CHP Application	843
Case Study 4: A Fuel Cell Application	844
Case Study 5: Tubular Solid Oxide Fuel Cell/Gas Turbine Hybrid Cycle Power Systems	849
Case Study 6: A Turbogenerator for a Fuel Cell/Gas Turbine Hybrid Power Plant	853

## 17. Training and Education

Industry Training	861
Case Study 1: OEM Project Application	862
Engineers Training	862
Training Programs within Academia	866
Case Study 2: Industry Supported Multimedia Aeroengine Design Case	868
Case Study 3: Theoretical Calculations Compared with Actual Cogeneration Plant	869
Case Study 4: Undergraduate Engine Design Program	870
Mission Analysis	872
Case Study 5: Gas Turbine University Laboratory Study	877
Aircraft Gas Turbine Engine Experiment	878
Case Study 6: OEM Working with Several Universities on Gas Turbine Prototype Development	882
Turbine Validation	883

## 18. Future Trends in the Gas Turbine Industry

Some Newer Technologies	887
Coal Fuel Combustion Related	887
Hydrogen Turbines	889
Fracking	889
Improvement of Established Technologies	889
Technologies that Reduce Required Infrastructure	890
Resultant Energy/Fuels Usage Chart	891
Smart Grid	891
Transmission and Distribution Technology Improvements	892
Fuels and their Emissions	892
Future Business Trends	893
The Agents of Change	895
Legislation, Financing, and Business Models	896
Political Incentives, Infrastructure, and SPPs	898
Positioning with Respect to Technology	900
The Gas Turbine's Main Rivals	900
Using Technology to Advantage	902
Fuel Technologies	902
Environmental International Caucuses	904
OEM Changing Fortunes	904
OEM Acquisitions, Joint Ventures, and Licensees	904
Reading Renewables	906
End-User Associations	907
The Independent Contractor Factor	907
Distributed Power: How Large Does a Power Plant Need to Be?	908
The Age of the Personal Turbine	908
The Power Mix	908

## 19. Basic Design Theory

Operational Envelope	913
The Environmental Envelope	914
Installation Pressure Losses	923
The Flight Envelope	924
Properties and Charts for Dry Air, Combustion Products, and Other Working Fluids	927
Description of Fundamental Gas Properties	927
Description of Key Thermodynamic Parameters	928

Composition of Dry Air and Combustion Products	928
The Use of CP and Gamma, or Specific Enthalpy and Entropy, in Calculations	929
Database for Fundamental and Thermodynamic Gas Properties	930
Formulae	933
"Design Point" Engine Design, Definitions, and Terminology	938
Design Point Performance Parameters, Definitions	938
Linearly Scaling Components and Engines	941
Design Point Exchange Rates	941
Open Shaft Power Cycles	942
Combined Heat and Power	943
Closed Cycles	944
Aircraft Engine Shaft Power Cycles	944
Aircraft Engine Thrust Cycles	944
The Engine Concept Design Process	944
Basic Starting and above Idle Transient Performance Assessment	946
Margins Required When Specifying Target Performance Levels	946
Design and Development Program Shortfall	946
Case Study 1: Prediction Effects of Mass-Transfer Cooling on the Blade-Row Efficiency of Turbine Airfoils	947
One-Dimensional Methods	949
The TOTLOS Method	950
Case Study 2: Advanced Technology Engine Supportability: Preliminary Designer's Challenge	953
Historical Trends/Recent GEAE Experience	953
Advanced Materials	954
Engine Preliminary Design	954
Specific Examples	955

## 20. Additional References and Appendix for Unit Conversion

Additional General References	965
Some Specific References	960
