

TABLE OF CONTENTS

Acknowledgement ix

Preface to the Second Edition xi

Chapter 1. Introduction1

- 1.1 The Nature and Scope of Composite Materials 1
- 1.2 Composite Materials Terminology 2

Chapter 2. Properties of an Orthotropic Lamina7

- 2.1 Stress and Strain 7
- 2.2 Generalized Hooke's Law 14
- 2.3 Lamina Constitutive Relationship 19
- 2.4 Shear Coupling Phenomena 32
- 2.5 Thermal and Environmental Induced Distortion of
Orthotropic Lamina 37
- References 41

Chapter 3. Laminated Composites43

- 3.1 Introduction 43
- 3.2 Review of Lamina Elastic Behavior 43
- 3.3 Strain Displacement Relationships 44
- 3.4 Definition of Stress and Moment Resultants 48
- 3.5 Laminate Constitutive Equations 51
- 3.6 Source of Simplifications of Laminate
Constitutive Equations 64
- 3.7 Other Forms for the General Constitutive Equations 69
- 3.8 Invariant Forms of the $[A]$, $[B]$, and $[D]$ Matrices 71

3.9	Influence of Thermal and Environmental Induced Dilation on Laminate Response	76
3.10	Nomenclature for Laminated Composites	80
	Notation	81
	References	82
Chapter 4. Strength of Laminated Composites		83
4.1	Introduction	83
4.2	Strength of the Orthotropic Lamina	83
4.3	Laminate Strength Analysis	87
4.4	Strength of Notched Laminates	100
4.5	Residual Stresses and Strength	108
4.6	Interlaminar Stress and Delamination	110
	References	122
Chapter 5. Analysis of Composite Structures		125
5.1	Introduction	125
5.2	Equilibrium Equations	125
5.3	Compatibility Condition	128
5.4	Simplification Introduced by Midplane Symmetry	129
5.5	Specially Orthotropic Laminates	131
5.6	Significance of Bending-Membrane Coupling	131
5.7	Significance of the D_{16} , D_{26} Terms	133
5.8	Laminated Beams	135
5.9	Laminated Cylindrical Shells	141
	Notation	151
	References	151
Chapter 6. Structure Property Relationships for Composite Materials		153
6.1	Introduction	153
6.2	Review of Required Material Coefficients	154
6.3	Review of Formal Approaches to the Prediction of Elastic Constants	156
6.4	The Halpin-Tsai Equations	161
6.5	Transport Properties	176
6.6	Thermal Expansion and Dimensional Stability	180
	References	188
Chapter 7. Characterization and Behavior of Structural Composites		193
7.1	Introduction	193
7.2	Stiffness Measurements	193

7.3	Fracture Characterization	196
7.4	Analysis of Characterization Procedures	197
7.5	Conclusions on Characterization Procedures	205
7.6	Materials Properties	205
	References	213

<i>Appendix A: Matrices and Tensors</i>	215
---	-----

<i>Appendix B: Equilibrium Equations for Plates</i>	223
---	-----

<i>Appendix C: Trigonometric Functions for Laminated Composites</i>	227
---	-----
