

CONTENTS

CONTENTS AND SYMBOLS	3
1. INTRODUCTION.....	11
2. EFFECT OF UNDERWATER EXPLOSION ON SHIP.....	19
2.1. Classification of impacts of underwater explosions on ship.....	21
2.1.1. Contact explosions.....	21
2.1.2. Close-field non-contact explosions	24
2.1.3. Far-field non-contact explosions	27
2.1.4. Explosion of mines under a general cargo vessel PLO m/s Józef Wybicki.....	28
2.2. Marine tests of underwater explosions on the ship.....	32
2.3. Sea mine threats on the world's reservoirs	40
3. DESCRIPTION OF UNDERWATER EXPLOSION.....	45
3.1. Description of the pressure wave for TNT explosion in water acc. to R.H. Cole	45
3.2. R.H. Cole formulas with W. Stepanov and J.S. Nawagin corrections.....	50
3.3. Description of explosion pressure wave acc. to Warren D. Reid.....	51
3.4. Description of explosion pressure wave acc. to T.L. Geers, K.S. Hunter.....	55
3.5. Summary and comparison of pressure wave models acc. to different authors.....	57
3.6. Duration of the pressure wave impact on the ship.....	61
3.7. The angle of incidence of the pressure wave on the ship.....	63
3.8. The value of pressure acting on the ship's hull.....	66
3.8.1. The value of pressure behind the front of regular reflected wave.....	67
3.8.2. The value of pressure behind the front of irregular reflected wave - - Mach wave.....	72
3.8.3. The wave reflected from the bulkhead	73
3.8.4. The pressure wave reflected from water surface and surface cavitation.....	75
3.8.5. Pressure wave reflected from the bottom	79
3.9. Determination of pressure loading an object in water.....	81
3.10. JWL equation of state for TNT	83

3.11. UNDEX procedure.....	86
4. DESCRIPTION OF MATERIAL PROPERTIES IN NUMERICAL APPROACH ...	89
4.1. Elastic characteristics of material.....	90
4.2. True plastic characteristics of material.....	94
4.3. Plastic material characteristics as a function of strain rate	97
4.4. Plastic material characteristics in the Johnson-Cook model.....	100
4.5. Other material models	108
4.6. The "triaxiality" coefficients.....	111
4.7. Modeling of material failure	115
4.8. The Johnson-Cook failure model	119
5. NUMERICAL INTEGRATION OF MOTION EQUATION IN FEM.....	121
5.1. The method of central (finite) differences.....	122
5.2. Houbolt method	124
5.3. Newmark and Euler Method.....	125
5.4. Wilson method.....	127
6. SHIP'S HULL GEOMETRY AND DISCRETIZATION	131
6.1. Finite elements used for discretization of the ship's hull	133
6.2. Connecting finite elements of different types through connectors	136
6.3. Modeling of devices and equipment.....	139
7. ACOUSTIC MEDIUM	145
7.1. Equilibrium equations of acoustic medium.....	145
7.2. Boundary conditions.....	148
7.3. Modeling of the acoustic medium in CAE program.....	150
7.4. Defining an incident shock wave (acoustic forces) in acoustic medium ..	152
7.5. Discretization of the acoustic medium.....	153
8. CALCULATION EXAMPLES	159
8.1. Analysis of the strength of the ship's hull flat bottom	159
8.2. Strength analysis of the hull structure of the Kilo-class submarine.....	165
8.3. The impact of the pressure wave with reflection from the bottom on the ship's hull	184
9. SUMMARY	199
BIBLIOGRAPHY	201
SOFTWARE AND LICENSES	208
