PREFACE .. .. .	Page 7
INTRODUCTION .. .. .	11

## SECTION I—GENERAL THEORY

By MARTIN DAVIDSON, D.Sc., F.R.A.S.

Chapter 1. THE GYROSCOPE (GENERAL) .. .. .	14
How it got its name—Precession—Experiments with a simple gyroscope—Momentum—Moment of momentum or angular momentum—Conservation of angular momentum—Illustrations of the principle—Angular momentum about different lines—Why the axle of the rotor tends to maintain the same direction—Convention regarding direction of spin—Why a gyroscope descends—Rules for precession—The gyrostat.	
Chapter 2. TYPES OF GYROSCOPES .. .. .	24
Two-framed gyroscope—The Model Gyro—Why the gyro-compass finds the North.	
Chapter 3. GYROSCOPE PROBLEMS .. .. .	30
Angular velocity—Relation between linear and angular velocities—Moment of inertia and angular momentum for various bodies—Parallelogram of velocities—Parallelogram of angular velocities—Couples—Relation between a couple, moment of inertia and angular velocity—Relation between a torque, angular momentum of the rotating wheel and rate of precession—Problems illustrating the formula $K = I\omega\Omega$ —Illustrations of precession—An alternative method for explaining precession and deriving the formula $K = I\omega\Omega$ —Explanation of the experiments with the two-framed gyroscope—The Brennan monorail—Table of moments of inertia for some ordinary solids—General Survey.	
Appendices 1. Speed and Course Error .. .. .	51
2. Period of undamped oscillation of the gyro-compass axle in azimuth .. .. .	53
3. Ballistic deflection .. .. .	57
4. Damping of the oscillations of the gyro-compass .. .. .	59
5. Azimuthal angular velocity and acceleration of a body moving on the earth's surface .. .. .	63
6. Effect of the earth's rotation and of linear motion along a great circle on a space balanced free gyroscope .. .. .	64

## SECTION II—MARINE APPLICATIONS

By G. C. SAUL, A.I.N.A., F.R.A.S.

Chapter 1. THE GYRO COMPASS .. .. .	69
Evolution of the magnetic compass—Early history of the gyro compass—Apparent movement of free gyroscope relative to earth's surface—Essential requirements for a meridian seeking gyroscope—Early gyro compasses—Effect of ship's course and speed—Ballistic deflection—Damping of oscillation about the meridian.	

# CONTENTS—*contd.*

	<i>Page</i>
Chapter 2. THE SPERRY MARK XIV GYRO COMPASS . . . . .	78
Sensitive element—Phantom element—Spider element—Gimbal system—Gyro drive system—Follow-up system—Transmission system—Control element—Speed and latitude corrector—Auxiliary latitude corrector.	
Chapter 3. THE BROWN GYRO COMPASS . . . . .	87
Comparison of Sperry and Brown gyro compasses—General description—Gimballing, binnacle and anti-shock arrangements—Relay transmitters—Electrical supply arrangements—Latitude, course and speed correction.	
Chapter 4. THE ANSCHÜTZ GYRO COMPASS . . . . .	96
Original single-gyro and three-gyro Anschütz compasses—The two gyro Anschütz compass—Binnacle and gimballing arrangements—Gyrosphere and outer sphere—Gyro-drive system—Cooling system—Transmission system—Damping arrangements—Damping of oscillation about the meridian—Ballistic deflection.	
Chapter 5. THE MARINE GYRO PILOT . . . . .	104
Effect of wind and weather—Steering by magnetic and gyro compasses—Economy of labour and fuel by gyro pilot—Similarity in principle of single unit and two unit gyro pilots—Bridge control unit—Principle of automatic steering—Alteration of course or ship's heading—Weather adjustment—Initial rudder adjustment—Self-synchronous feature—The Brown automatic helmsman—Adaptation for control of all electric steering gear.	
Chapter 6. GYROSCOPIC STABILISATION OF SHIPS . . . . .	114
Why a ship rolls—Wave motion—Ship stability characteristics—Rolling characteristics—Stabilisation in relation to meta-centric height—Early forms of ship stabiliser—The gyroscope as a ship stabiliser.	
Chapter 7. THE SPERRY GYRO STABILISER . . . . .	120
The passive gyro as a stabiliser—Control of precessional movement—Operation of precession motor and brakes—Control gyro— <i>Conti di Savoia</i> stabilising equipment—Bearing load problems—Main gyro rotor and casing—Electrical system—Buffer locks—Balancing.	
Chapter 8. THE DENNY BROWN SHIP STABILISER . . . . .	129
Operating principles—Control gyro—Anticipatory mechanism—Single and multiple fin installations—Installation in T.S.S. <i>Isle of Sark</i> —Other applications.	
Chapter 9. THE GYROSCOPE IN THE TORPEDO . . . . .	134
Gyroscopic control of direction-keeping mechanism—Rotor and gimbals—Controlling valve—Relay valve—Steering engine—Starting mechanism—Rectifying clutch—Air supply—Operation—Conclusion.	

# CONTENTS—*contd.*

## SECTION III—AERONAUTICAL APPLICATIONS

By J. A. WELLS, A.F.R.Ae.S., and A. P. GLENNY, B.Sc.

	<i>Page</i>
Chapter 1. INTRODUCTORY .. .. .	141
Flying and navigational instruments—The gyroscopic instruments—Gyroscopic datum—Earth rotation and speed of aircraft—Use of gyroscopic compass—The directional gyro—The gyro vertical—Angular velocity meters—Angular accelerometers—Automatic pilots.	
Chapter 2. DIRECTION INDICATORS .. .. .	162
Sperry directional gyro—Brown static compass—Gyro-magnetic compasses—R.A.F. gyro-magnetic compass—Sperry "slave" gyro-magnetic compass—Askania gyro-magnetic compass—Brown pitch-azimuth indicator.	
Chapter 3. RATE-OF-TURN INDICATORS .. .. .	184
Reid and Sigrist turn indicator—Schilovsky-Cooke turn indicator—Horn electrical turn indicator—Pullin electrical turn indicator.	
Chapter 4. GYRO-VERTICALS .. .. .	196
Griffin gyro indicator—Sperry artificial horizon—Limitless artificial horizons—The Gyrorector—O.M.I. artificial horizon—Acceleration errors—Turn error correction—Comparison of pneumatic and electric operation—Sperry electrical artificial horizon—Horn artificial horizon—Pioneer Bendix Flux-gate gyro—Gunsights and bombsights, etc.	
Chapter 5. AUTOMATIC PILOTS .. .. .	222
Historical note—Function of the automatic pilot—Functioning—Sperry A.3 gyropilot—Directional gyro control unit—Bank and climb gyro control unit—Rate and acceleration pick-off systems—Pollock Brown—R.A.E. Mk. I and Mk. VIII—German three axis—Minneapolis Honeywell C-1—V.1 flying bomb.	
GLOSSARY .. .. .	253
