Foreword	5
Acronyms and abbreviations	7
1. Background	11
2. Exhaust emissions in shipping – legal issues and regulatory development	14
2.1. Legal conditions of the marine environmental standards	14
2.2. High sea and regional environmental policy	15
2.3. Port environmental strategy regulations	21
3. Marine diesel engine emissions and reduction strategy	27
3.1. Territorial range of shipping emissions legislations	27
3.2. NO _x emission and abatement principles	27
3.3. SO _x emissions and removal options	38
3.4. Combined SO _x and NO _x removal	40
3.5. Particulate matter emissions – background	42
3.5.1. The concept of PM	42
3.5.2. Dependence of PM emission quantity and quality on method of determination	44
3.5.3. Dependence of PM emission on fuel quality	50
3.5.4. Dependence of PM emission on engine load	51
3.5.5. PM emission factors	52
3.6. PM emission potential control measures	56
3.6.1. PM abatement perspective	56
3.6.2. Working principles of PM removal	56
3.6.3. Reduction of PM constituents by fuel quality change	59
4. Auxiliary steam boilers operation and related emissions	61
4.1. Auxiliary steam boiler operating conditions	61
4.2. Ship operating mode and steam demand	61
4.3. Steam boiler output and emissions	68
4.4. Auxiliary steam boiler emissions control	74
4.4.1. Boiler emissions reduction approach	74
4.4.2. NO _x emission control	74
4.4.3. SO _x emission control	78
5. Technology for reducing emissions from marine engines	80
5.1. Selective catalytic reduction – SCR	80
5.1.1. SCR systems fundamentals	80

5.1.2. Functional basis of SCR system	81
5.1.3. Development of marine SCR systems	82
5.1.4. General constrains	90
5.1.5. Technological feasibility	92
5.1.6. Predicted costs of SCR systems	94
5.2. Exhaust gas recirculation – EGR	95
5.2.1. EGR systems fundamentals	95
5.2.2. Working principle of EGR	96
5.2.3. EGR systems development	97
5.2.4. General constrains	101
5.2.5. Technological feasibility	104
5.3. Scrubbing	105
5.3.1. Scrubbing systems fundamentals	105
5.3.2. Functional basis of wet scrubbing	108
5.3.3. Current state, development and general constraints of wet scrubbing	110
5.3.4. PM behaviour in water based SO _x scrubbing systems	114
5.3.5. Dry scrubbing	116
6. Outlook for emission abatement technology	117
6.1. General constraints and abatement technology development	117
6.2. Cost structure of emission reduction measures	123
7. Conclusions	128
Bibliography	131
List of figures	142
List of tables	144
Links	145
Appendix – PM emission factors of marine diesel engines	146
