16	Air supply	10		
16.1	Introduction	12	17.17	Examples according to the engine classification
16.2	The amount of air	12	17.18	Combustion-air cooling
16.3	Air supply to the engine	14	17.19	Special cooling systems
16.4	Principle of turbocharging	15	17.20	Pipe coolers and plate coolers
16.5	Turbocharger manufacturers	17	17.21	Cooling systems in a diesel-power plant
16.6	Capacity curves	21	17.22	Cogeneration systems
16.7	Description of three turbocharger manufacturers – development of modern turbochargers	23	17.23	Cooling systems for gas- and dual-fuel engines
16.8	Small turbochargers, engine categories I and II	25	17.24	Summary for cooling-water systems
16.9	Turbocharger with a separate power turbine	29		
16.10	Power turbines with generator	29	18	Lubrication of engines
16.11	Air supply in four-stroke engines	31	18.1	Introduction
16.12	Air supply in two-stroke crosshead engines	36	18.2	The purpose of lubrication
16.13	Various approaches to turbocharging in two-stroke crosshead engines	40	18.3	Three types of lubrication
16.14	Some important points of interest with regard to the air supply in diesel engines	42	18.4	Engine parts that require lubrication and cooling
16.15	Maintenance of turbochargers	45	18.5	Common lubricating-oil system
16.16	Problems with turbocharging	48	18.6	Examples of lubricating-oil systems following the four classification categories
16.17	Engine load	50	18.7	Lubricating-oil properties
16.18	Flow performance of scavenging- and combustion-air in a four-stroke trunk-piston engine and a two-stroke crosshead engine	52	18.8	Cleaning lubricating oil
16.19	New TCX turbocharger for two-stage turbocharging: MAN Diesel & Turbo	60	18.9	Lubricating-oil analysis
			18.10	Lubricating-oil analysis for gas-, dual-fuel- and diesel engines
			18.11	Nitration of lubricating oil in gas engines
			18.12	Examples of gas-engine lubricants
			18.13	Examples of engine manufacturers' specifications for lubricating oil in gas- and dual-fuel engines
17	Cooling of gas-, dual-fuel- and diesel engines	62	19	Endoscopy and measurements
17.1	Introduction	64	19.1	Borescope: design and capabilities
17.2	Cooling agents for gas-, dual-fuel- and diesel engines	66	19.2	Monitoring the state of repair of engine parts as part of a condition based maintenance
17.3	Cooling-water treatment	70	19.3	Examples of damage
17.4	Corrosion	72	19.4	Measurements: foil strain gauge with respect to piezo resistors
17.5	Products for cooling-water treatment	73	19.5	Preparing the engine for inspection using, for example, indicator cocks
17.6	Cooling-water treatment products, brands	74	19.6	Attaching and configuring the TDC-sensors for a four-stroke engine
17.7	Cleaning cooling-water systems contaminated with oil	74	19.7	Attaching and configuring the TDC-sensors for a two-stroke crosshead engine
17.8	Bacteriological contamination	74	19.8	Recording additional data during the measurement process on a performance sheet
17.9	Testing cooling water	74	19.9	Removing the sensors from a hot engine after the measurement process
17.10	Macro-biological growth in seawater-cooling systems	75	19.10	Measurements with the IMES EPM-XP Visualization software
17.11	Design of cooling-water systems	75	19.11	Measuring and fine-tuning with the DocSoft e-3 software
17.12	Cooling-water system defects	84	19.12	Different methods to achieve fuel savings
17.13	Damaged engine parts	85		
17.14	Standard cooling-water system	86		
17.15	Cooling systems according to the engine classification	86		
17.16	Examples of cooling methods for engine parts	99		

19.13	Measurements captured with the software <i>The Doctor</i>	175	22	Auxiliary sys systems: fuel- and lubricating-oil separators	282
19.14	The ISO correction according to ISO 3046-1: 2002 for shipping	178	22.1	Introduction on	284
19.15	Power indicator diagrams	179	22.2	Fuels	284
19.16	Measuring the shaft power with strain gauges	182	22.3	The principle pple of centrifugal separators	284
19.17	The state of repair of gas- and dual-fuel engines: inspections with borescopes and electronic measurements	184	22.4	Separation in a in a settling tank	284
19.18	Measurement methods that can be used with the borescope	186	22.5	Separation witi with a centrifugal separator	285
19.19	The use of borescopes in engines, turbochargers and gear boxes	196	22.6	Types of sepereparators	285
19.20	False brinelling	198	22.7	New separatorators by Alfa Laval	287
19.21	Two-stroke Wärtsilä crosshead engines measurements	198	22.8	Effects of sepaseparators	291
19.22	Example of an Engine Management System category III, MAN 51/60 DF	202	22.9	Installation effn efficiency	292
19.23	Measurements with electronic equipment, such as, The doctor and/or IMES and others	203	22.10	Examples of clof cleaning systems for lubricating oil, fuel, sludge ange and bilge water	292
19.24	Balancing of no load engine at stationary speed (idle)	208	23	Transmissioion gears, flexible couplings, vibration dai dampers, shafting and shaft generator dnr drives	304
19.25	Crystals used for measurements	211	23.1	Introduction on	306
19.26	Examples of measurements	211	23.2	Diesel-engineengine arrangements	306
19.27	'Organ pipe resonance' effect or the source of the higher measured pressures than actual pressures in the engine cylinder	224	23.3	Gear transmmission	318
19.28	Specific features of measurements for gas- and dual-fuel engines	237	23.4	Constructionsions and designs of gear transmissions	320
20	Diesel-Power Plants	238	23.5	Position of thf the input- and output shaft	322
20.1	Introduction	240	23.6	Types of teetheth	323
20.2	Classification of diesel-power plants	240	23.7	Gear transmmission for shaft generators	324
20.3	Uses for diesel-power plants	240	23.8	Couplings ;	328
20.4	Types of diesel-power plants	242	23.9	Torsional-vib:vibration dampers	331
20.5	Special performances of diesel-power plants	248	23.10	Engine shafts aft	335
20.6	An example of a large diesel-power plant for the generation of electricity	252	23.11	Examples of c of complete systems with diesel engines, redu/reduction gearing, shafting, couplings and vibrationtion dampers	338
20.7	Auxiliary engines	254	23.12	Vibration dan dampers below the engine block or frame	339
20.8	Outside the engine hall	255	23.13	Examples of e of engine arrangements with flexible vibration dan dampers	341
20.9	Fuel quality	256	23.14	Flexible connnections to the diesel engine	341
20.10	A few particulars	256	23.15	Double springing alignment: A new design	344
20.11	Examples of power plants	264	24	Emissions ins in gas-, dual-fuel- and diesel engines	346
21	Operational management and automation	268	24.1	Emissions ins in gas-, dual-fuel- and diesel engines	348
21.1	Introduction	270	24.2	Introducing 'ng 'the fossil fuel' society	348
21.2	Automation of diesel engines	270	24.3	Exhaust-gas gas composition	349
21.3	Examples of automation systems	270	24.4	Units of contontamination	357
21.4	Operational management	277	24.5	Methods for for the reduction of noxious emissions in exhaust-gat-gases	360
21.5	Complete systems for diesel engines, some examples	277	24.6	Primary metmethods	360
			24.7	Secondary mry methods	366
			24.8	Reduction obn of sulphur oxides in exhaust gases	370
			24.9	Removal of f of fine particles from exhaust gases	371
			24.10	Examples of s of the techniques that engine manufacturerturers apply to reduce emissions	371

24.11	Measures taken on-board large modern sea-going vessels	374	24.24	The Baltic Dry Index	420
24.12	New techniques: the Miller process	374	24.25	Ships either LNG fuelled or capable of running on LNG	421
24.13	New developments: the Hercules project	378			
24.14	Noxious emissions in gas- and dual-fuel engines: nitrogen oxides, carbon monoxides and hydrocarbons	381	25	Bedplates and engine alignments, gearboxes, shafts, propeller shafts and generators	422
24.15	Development of gas- and dual-fuel engines	381	25.1	Introduction	424
24.16	The composition of exhaust gases in gas- and dual-fuel engines	385	25.2	Ship propulsion	424
24.17	Greenhouse gases	387	25.3	Construction of the bedplate, engine category IV	424
24.18	Emission regulations for the international shipping industry established by the IMO	388	25.4	Examples of rigid mounting, engine category III	427
24.19	Exhaust-gas emissions in dual-fuel engines	390	25.5	Flexible mounting of propulsion engines; engine categories I, II and III	429
24.20	An example of a Wärtsilä 50DF dual-fuel engine	390	25.6	Engine alignment	431
24.21	Exhaust-gas purification for gas-, dual-fuel-, diesel- and heavy-fuel oil engines	396	25.7	Flexible arrangement of diesel engines and the piping, wiring and other equipment attached to the engine	438
24.22	Particulate matter	416	25.8	Mounting methods for propulsion engines and other components with critical alignments	439
24.23	International Association of Ports and Harbours IAPH	420	25.9	SKF new Vibracon kit	442
