PREFACE	5
1. RULES OF NETWORK-CENTRIC WARFARE	7
1.1 Introduction	7
1.2. Transformation and broad view for soldiers	8
1.3. Information technology on the battlefield	10
1.4. Battlefield command systems	12
1.5. Command and control systems	13
1.6. Model of military situations for NCW	14
1.7. Tactical network topology	16
2. THREAT FROM UNDERWATER UNEXPLODED ORDNANCE TO HUMAN ACTIVITY AT SEA	20
2.1. Historic background	20
2.2. German torpedoes – usual examples of uxu in Gulf of Gdańsk	23
2.3. The examples of finds	24
2.4. Organization the liquidation of the underwater unexploded ordnance	29
2.5. Conclusions	31
3. MODELING OF LASER RANGE-MEASUREMENT OF UNDERWATER OBJECTS AT SEA – RESEARCH RESULTS	33
3.1. Introduction	33
3.2. Extinction coefficient of sea water	34
3.3. Modeling of laser range measurement	35
3.3. Background radiation power	37
3.4. Echo signal power	37
3.5. Signal to noise ratio	39
3.6. Summary	42
4. UNCERTAINTY PROPAGATION IN A FAULT TREE. A MONTE CARLO APPROACH	44
4.1. Foreword	44
4.2. Uncertainty and randomness	44
4.3. The lognormal distribution	45
4.4. Inlet data	47
4.5. Calculation environment	47
4.6. Generating lognormal random numbers	48
4.7. The “AND” gate	48
4.8. The “OR” gate	48
4.9. Passing through gates	48
4.10. Conclusions	52
5. NEURAL META-HEURISTICS FOR INTERPOLATION OF UNDERWATER OBJECT FEATURES	60
5.1. Introduction	60
5.2. Network for a depth evaluation	61
5.3. Training rules for neural networks	63
5.4. Capabilities of radial neural networks	65
5.5. Identification of underwater object features	67
5.6. Concluding remarks	72
6. OPTIMIZATION OF RADAR NETWORK	74
6.1. Introduction	74
6.2. Design of radar systems	75
6.3. Model and problem formulation	76
6.4. Multi-criterion optimization problem	77
6.5. Numerical experiments	77
6.5. Conclusions	78
7. FINDING THE UNDERWATER VEHICLE TRAJECTORY BY OPTIMIZATION META-HEURISTICS	82
7.1. Introduction	82
7.2. Vehicle trajectory evaluation	83
6.3. Optimization problem	84

7.4. Tabu programming.....	86
7.5. Concluding remarks	91
8. NEURAL ALGORITHMS FOR DECISION MAKING AID.....	93
8.1. Introduction.....	93
8.2. The Hopfield model of neural networks.....	96
8.3. Linear problem with continuous variables	97
8.4. Neural model for linear optimization	97
8.5. The extended LTH model	99
8.6. Multi-criterion linear optimization by PLNN.....	101
8.7. Multiobjective quasi-quadratic programming by the PQNN model.....	102
8.8. Some optimization problems with zero-one decision variables	102
8.9. HNN/F1/C for linear constrained minimization.....	105
8.10. HNN/F2/C for quasi-quadratic constrained minimization	106
7.11. Some experimental examples.....	107
8.12. Concluding remarks	110
9. FUNDAMENTAL LIMITATIONS TO INFRARED SENSOR PERFORMANCE IN MARITIME CONDITIONS	113
9.1. Introduction.....	113
9.2. Naval applications of EO/IR sensors.....	114
9.3. Characteristics of the sea backgrounds	119
9.4. Background effects on the target detection range in maritime conditions	122
9.5. Conclusion	125
10. DIGITAL SYNCHRONOUS HYDROPHONE AS A NODE IN A MULTI-ELEMENT PASSIVE SONAR ARRAY	127
10.1. Introduction.....	127
10.2. Construction of the synchronous digital hydrophone.....	128
10.3. Algorithm of the signal processing	129
10.4. Antenna.....	132
10.5. Concluding remarks	133
11. TOOLS OF ARTIFICIAL INTELLIGENCE IN SUPPORT OF DECISION MAKING PROCESSES	135
11.1. Introduction.....	135
11.2. Fuzzy Logic Systems	135
11.3. Expert Systems.....	140
11.4. Distributed Systems	144
11.5. Conclusion	147
12. INFLUENCE OF PSEUDORANGE MEASUREMENT ERRORS AND SPACE SEGMENT GEOMETRY ON GPS FIXES DISTRIBUTION.....	148
12.1. Introduction.....	148
12.2. Observation equation and measurement model – classic approach.....	148
12.3. Observation equation and measurement model – novel approach	150
12.4. Numerical experiment	153
12.5. Concluding remarks	154
13. PROTECTION LEVEL OF “SNAPSHOT” RAIM METHODS IN POOR GEOMETRY OF SATELLITES.....	156
13.1. Introduction.....	156
13.2. Theory of receiver autonomous integrity monitoring.....	156
13.3. Approximate radial-error protected.....	160
13.4. Simulations of ARP values in poor geometry of satellites	161
13.5. Concluding remarks	162
14. SHIP'S CLASSIFICATION USING HYDROACOUSTICS MEASUREMENTS RESULTS	164
14.1. Introduction.....	164
14.2. Classification method.....	166
14.3. The results of research.....	169
14.4. Conclusion	174
