|--|------------|
| <b>PREFACE</b>   | <b>v</b>   |
| <b>1. INTRODUCTION</b>   | <b>1</b>   |
| 1.1 Modulating and Coding  | 3          |
| 1.2 The Structure of the Book  | 5          |
| <b>2. CHANNEL CHARACTERIZATION</b>   | <b>8</b>   |
| 2.1 Characterization for Modulation  | 9          |
| 2.2 Characterization for Coding  | 13         |
| 2.3 Summary  | 19         |
| <b>3. PERFORMANCE BOUNDS FOR DIGITAL COMMUNICATION</b>                                       | <b>20</b>  |
| 3.1 Bounds for Modulation  | 21         |
| 3.2 Bounds for Coding  | 30         |
| 3.3 Example of the Use of Bounds on a Telephone Channel                                      | 35         |
| 3.4 Summary  | 38         |
| <b>4. BASEBAND PULSE TRANSMISSION</b>  | <b>40</b>  |
| 4.1 Design and Performance of PAM for Ideal Channels   | 43         |
| 4.2 Effect of Imperfect Channels on the PAM System   | 59         |
| 4.3 Controlled Intersymbol Interference in PAM: Duobinary and<br>Partial-response Techniques | 83         |
| 4.4 Summary  | 90         |
| <b>5. OPTIMIZATION OF THE BASEBAND SYSTEM</b>  | <b>93</b>  |
| 5.1 Receiver Optimization  | 94         |
| 5.2 Transmitter Optimization   | 112        |
| 5.3 Joint Transmitter and Receiver Optimization  | 118        |
| 5.4 Numerical Example  | 122        |
| 5.5 Summary  | 125        |
| <b>6. EQUALIZATION OF THE BASEBAND SYSTEM</b>  | <b>128</b> |
| 6.1 Transversal-filter Equalization  | 130        |
| 6.2 Equalizer-adjustment Algorithms  | 147        |
| 6.3 Equalization Systems   | 156        |
| 6.4 Summary  | 164        |

|  |            |
|--|------------|
| <b>7. LINEAR MODULATION SYSTEMS</b>  | <b>166</b> |
| 7.1 Methods of Modulation  | 166        |
| 7.2 Methods of Demodulation  | 178        |
| 7.3 Recovery of Carrier Phase and Frequency                                | 182        |
| 7.4 Illustrative Examples  | 192        |
| 7.5 Summary  | 199        |
| <b>8. FREQUENCY MODULATION</b>   | <b>200</b> |
| 8.1 The Digital FM Signal  | 200        |
| 8.2 Demodulation of FM Signals   | 207        |
| 8.3 Narrowband, Multilevel, FM Data-Transmission Systems                   | 226        |
| 8.4 Wideband FM Systems  | 232        |
| 8.5 Summary  | 241        |
| <b>9. DIGITAL PHASE MODULATION</b>   | <b>246</b> |
| 9.1 Digital Phase-modulated Signals  | 246        |
| 9.2 Digital Phase Detection  | 248        |
| 9.3 Comparisons with Other Modulation Systems                              | 268        |
| 9.4 Summary  | 269        |
| <b>10. FUNDAMENTAL PROPERTIES OF ERROR-CORRECTING CODES</b>                | <b>277</b> |
| 10.1 Introduction  | 277        |
| 10.2 Block Codes   | 281        |
| 10.3 Convolutional Codes   | 297        |
| 10.4 Summary   | 304        |
| <b>11. ERROR CONTROL USING BLOCK CODES</b>                                 | <b>305</b> |
| 11.1 Encoding, Syndrome Calculation, Error Detection, and Error Correction | 306        |
| 11.2 Random-error Correction   | 312        |
| 11.3 Burst-error Correction  | 341        |
| 11.4 Codes for Correcting Bursts and Random Errors                         | 350        |
| 11.5 Performance   | 355        |
| 11.6 Synchronization-error Correction                                      | 361        |
| 11.7 Summary   | 368        |
| <b>12. ERROR CONTROL USING CONVOLUTIONAL CODES</b>                         | <b>374</b> |
| 12.1 Encoding, Syndrome Calculation, and Error Correction                  | 375        |
| 12.2 Random-error Correction   | 380        |
| 12.3 Burst-error Correction  | 395        |
| 12.4 Codes for Correcting Bursts and Random Errors                         | 404        |
| 12.5 Summary   | 406        |
| <b>REFERENCES</b>  | <b>411</b> |
| <b>INDEX</b>   | <b>429</b> |
