

# Contents

Preface	ix
Introduction	xiii
Chapter 1 Modern Approaches to Modern Radar Problems	1
1.1 Target Detection Methods, Old and New	1
1.2 Discriminating Man-Made Targets From Clutter	4
1.3 Target Identification	7
1.3.1 Scope of the Treatment	9
1.4 Summary of Conventional Radar Imaging	9
1.5 Radar Imaging Terminology	11
References	15
Chapter 2 The Backscattering Behavior of Man-Made Targets	17
2.1 The Applicability of the Point-Target Resolution Theory	17
2.2 General Scatterer Classes and Their Significance	20
2.2.1 Discontinuities	20
2.2.2 Smooth Extended Surfaces	21
2.2.3 Corners	22
2.2.4 Regular Cavities	23
2.2.5 Irregular Cavities	24
2.2.6 Multiple-Bounce Responses	24
2.2.7 Traveling Wave Returns	25
2.2.8 Multiple Backscattering Modes	25
2.3 The Problem of Target Modeling	26
2.3.1 Nondispersive and Dispersive Scatterers	26
2.3.2 The Significance of Dispersive and Nondispersive Scatterers	27
2.3.3 Target Modeling and Scatterer Prediction	28

2.4	Sideband Responses	29
2.4.1	General Nature of Sideband Responses	29
2.4.2	An Illustration of Sideband Responses in a Ground Vehicle Image	30
2.4.3	Properties of the Sideband Responses	34
2.4.4	Illustrations of Sideband Responses	45
2.5	Summary	65
	References	68
Chapter 3	The Resolution Problem	71
3.1	Resolution and Measurement Precision	71
3.2	Resolution Performance	77
3.3	Radar Signals and Resolution	82
3.3.1	Unmodulated Short Pulse	82
3.3.2	Linear FM Signal	82
3.3.3	Phase Shift Code	84
3.4	Summary	84
	References	86
Chapter 4	Measurement Principles for Point Reflectors	87
4.1	The Single Point Scatterer	87
4.1.1	Mathematics as a Foundation for Modern Radar Signal Processing	87
4.1.2	Signal Domain and Image Domain	91
4.1.3	Radar Return From a Fixed Point Scatterer	93
4.1.4	Fixed Point Scatterer in a Noise Background	101
4.1.5	Fixed Point Scatterer in Noise, Low SNR per Pulse	108
4.1.6	Detection of a Fixed Point Target in Noise	116
4.1.7	Measurements in the Range Domain	123
4.2	Multiple Fixed Point Scatterers with Constant Dopplers	124
4.2.1	General Approach to the Analysis	124
4.2.2	Image Domain Analysis Versus Transform Domain Analysis	128
4.2.3	Amplitude and Phase Patterns of Two Fixed Point Scatterers	132
4.2.4	Resolution of Two Fixed Point Scatterers	135
4.2.5	Three and More Fixed Point Scatterers	143
4.2.6	Interpretation	148
4.3	Two Unresolved Fixed Point Scatterers	151
4.4	Curved Phase Functions From Unresolved Multiple Fixed Point Scatterers	159
4.5	Development and Automation of CIA Algorithms	163
4.6	Summary	169
	References	171

Chapter 5	Specific Target Features	173
5.1	Smooth Curved Surfaces or Sliding Point Scatterers	173
5.1.1	Flat Plates	175
5.2	Multiple-Bounce Reflectors	175
5.2.1	Overview	175
5.2.2	The Trihedral Corner Reflector	176
5.2.3	The Dihedral Corner Reflector	187
5.3	Features With Shifting Phase Centers	191
5.3.1	General Consideration of Phase Center Shifts	193
5.3.2	The Sideband Generation Mechanism	198
5.4	Smooth Backscattering Modes From Extended Features	214
5.4.1	Nature of the Backscattering	214
5.4.2	Measurement of Feature Size	218
5.5	Features With Irregular Phase Center Motions	226
5.6	Curved Surfaces	232
5.7	Multiple Delayed Returns	237
5.7.1	Delayed Returns for Aircraft	237
5.7.2	Delayed Returns for Ground Vehicles	241
5.8	Features With Traveling Wave Responses	251
5.9	Ground-Bounce Returns	266
5.9.1	Nature of Ground-Bounce Responses	266
5.9.2	Ground-Bounce Illumination of Single Features	267
5.9.3	Parallel-Plate Bounces	268
5.9.4	Repetitive Bounces Between Features, Induced by Ground Bounces	272
5.9.5	Noncoherency via Ground Bounce	275
5.10	Summary	279
	References	282
Chapter 6	Motion Compensation for Moving Targets	283
6.1	Terminology and Scope of the Treatment	283
6.2	Requirements on the Motion Compensation	284
6.3	Motion Compensation Steps	286
6.3.1	General Description of the Motion Compensation	286
6.3.2	Range Tracking of the Entire Aircraft	289
6.3.3	Doppler Tracking of the Entire Aircraft	292
6.3.4	The Necessity of Tracking Individual Scatterers	303
6.3.5	Doppler Tracking of Individual Scatterers	311
6.3.6	Phase Tracking of a Reference Scatterer	312
6.3.7	Correction of the Nonuniform Rotation Rate	321
6.3.8	Polar Format Processing	325
6.3.9	Fine Phase Compensation	326
6.4	Summary	329
	Reference	331

Chapter 7	Generation of the Target Outlines	339
7.1	Measurement Procedure	339
7.2	Basic Measurement Principles	341
7.3	Example of Outline Generation for a Ground Vehicle	346
7.4	Example of a Case With Very Weak Edge Scatterers	381
7.5	Summary	399
Chapter 8	The Significance and Problems of Crossrange Resolution	405
8.1	Resolution Versus Measurement Precision	405
8.2	Measurements on Images With Different Degrees of Crossrange Resolution	407
8.3	Imaging at Broadside Aspects	432
8.4	Summary	442
Chapter 9	Special Processing Algorithms	449
9.1	Algorithms for Scatterer Resolution	449
9.1.1	The Two-Scatterer Algorithm (TSA)	449
9.1.2	Superresolution With the TSA	460
9.1.3	Setting the Boundaries of the Transform Window	466
9.1.4	Two-Dimensional Use of the TSA	469
9.1.5	The Enhanced Resolution Algorithm	475
9.2	Discrimination Algorithms for Responses From Man-Made Targets	481
9.2.1	Target Detection and Discrimination Algorithms	481
9.2.2	Algorithms for Two-Dimensional Resolution	484
9.2.3	Algorithms for One-Dimensional Resolution in Range	494
9.3	Summary	499
Chapter 10	Concluding Remarks	501
Appendix	The Two-Scatterer Algorithm	505
	About the Authors	517
	Index	519
