	PAGE
PREFACE . . . . .	vii
 CHAPTER I 	
STATIC PRESSURE OF A FLUID . . . . .	1
Introduction—Properties of a fluid—The hydraulic press— Pressure head of a liquid—Pressure gauges—Centre of pressure— Pressure on lock gates and dams.	
 CHAPTER II 	
THE BUOYANCY OF A LIQUID . . . . .	25
Buoyancy—Equilibrium of floating bodies—Metacentric height— Experimental and mathematical determination of metacentric height.	
 CHAPTER III 	
THE FLOW OF A FLUID . . . . .	36
Flow of water—Work done by pressure—Total energy of water— Bernoulli's equation—Venturi meter—Horse-power of jet— Centrifugal head of a revolving liquid—Vortex motion—Flow of gases—The Pitot tube.	
 CHAPTER IV 	
ORIFICES AND MOUTHPIECES . . . . .	68
Flow through orifices—Coefficients of contraction, velocity, and discharge—Large vertical orifices—Drowned orifices—Time of emptying tanks—Loss of head due to sudden enlargement, sudden contraction, and obstruction—External mouthpiece—Borda's mouthpiece.	
 CHAPTER V 	
NOTCHES AND WEIRS . . . . .	97
Rectangular and triangular notches—Principle of similarity— Francis' and Bazin's formula for rectangular weirs—Velocity of approach—Time of emptying reservoir with weir.—Syphon spillway.	
 CHAPTER VI 	
FRICTION AND FLOW THROUGH PIPES . . . . .	115
Fluid friction—Froude's experiments—Resistance of ships— Friction of revolving discs—Hydraulic gradient—Loss of head due to friction in pipes—Reynolds' experiments—Critical velocity —Parallel flow through pipes—Flow of gases through pipes— Transmission of power through pipes—Nozzles.	

## CHAPTER VII

	PAGE
FLOW THROUGH OPEN CHANNELS. . . . .	158

Formula for channels—Depth for maximum discharge for rectangular channels—Trapezoidal channel—Circular channel—Most economical section—Irrregular channels—Measurement of flow in channels—River bends—Water supply and rainfall—Hydraulic jump.

## CHAPTER VIII

RECIPROCATING PUMPS . . . . .	187
-------------------------------	-----

Types of pumps—Work done by pump—Effect of acceleration and frictional resistance—Slip, negative slip, and coefficient of discharge—Separation in suction and delivery pipes—Air vessel on suction and delivery pipes—Work saved by air vessel—Rate of flow into and from air vessel.

## CHAPTER IX

IMPACT OF WATER . . . . .	212
---------------------------	-----

Pressure of jet on stationary and moving flat plates—Pressure on curved vanes—Radial vanes—Velocity triangles—Propulsion of ships by jet.

## CHAPTER X

WATER TURBINES . . . . .	229
--------------------------	-----

Classification of turbines—Notation—Reaction turbines: outward and inward flow, axial flow, mixed flow—Velocity triangles for reaction turbines—Impulse turbines—Velocity triangles for impulse turbines—Summary of formula for turbine problems—Barker's mill—Pelton wheel—Specific speed of a turbine—Governor turbines—Characteristic curves—Principle of similarity and its application to model testing—Propeller turbines.

## CHAPTER XI

CENTRIFUGAL PUMPS . . . . .	280
-----------------------------	-----

Whirlpool chambers—Velocity triangles for pumps—Least starting speed—Head lost by varying flow—Pressure in pump—Specific speed of centrifugal pump—Diameter of impeller—Design of turbine pump—Principle of similarity—Characteristic curves—Multistage pump.

## CHAPTER XII

VISCOUS RESISTANCE OF FLUIDS . . . . .	305
--	-----

Viscous flow—Coefficient of viscosity—Effect of temperature—Stream line and turbulent flow—Viscous flow through pipes and between parallel surfaces—Resistance of bearings—Principle of dimensional similarity and its applications.

# CONTENTS

xi

## CHAPTER XIII

HYDRAULIC MACHINES, METERS, AND VALVES . . . . .	PAGE 334
--	-------------

The hydraulic accumulator and intensifier—The Kent Venturi meter—The Deacon meter—The hydraulic ram—The hydraulic press—Hydraulic crane and lifts—The hydraulic capstan—Valves, joints, and packing.

## CHAPTER XIV

THE AEROFOIL AND ITS APPLICATIONS . . . . .	364
---	-----

Pressure on flat plate—The aerofoil—Lift and drag coefficients—Aerofoil blading for turbines.

## CHAPTER XV

THE BOUNDARY LAYER . . . . .	380
------------------------------	-----

Velocity distribution—Thickness of layer—Drag coefficient—Variation of pressure—Roughness of surface—Scale effect—Comparison of fluid flow theories.

## CHAPTER XVI

COMPRESSIBLE FLUIDS . . . . .	405
-------------------------------	-----

Properties of gases—Isothermal and adiabatic processes—Bulk modulus—Velocity of pressure wave—Bernoulli's equation for gases—Pressure of atmosphere—Flow of gases through Venturi meter, orifices and nozzles—Buoyancy of balloon—Chattock tilting gauge.

## CHAPTER XVII

NON-DIMENSIONAL FACTORS. . . . .	437
----------------------------------	-----

Non-dimensional factors for compression waves, weirs, orifices, pipe orifice, and oiled bearings—Group method.

## CHAPTER XVIII

FURTHER PROBLEMS IN FLUID MECHANICS . . . . .	454
---	-----

Surface tension—Capillarity—Energy variation across streamlines—Two-dimensional flow—Vortices—Discharge from tank with inflow—Determination of coefficient of viscosity—Non-uniform flow in channels—Venturi flume—Pipe orifice—Broad-crested weir—Submerged weir—Oscillation of floating body—Nikuradse's experiments on rough pipes—Prandtl and Von Kármán's equations for pipe flow—Aerofoil flow recorder—Rotating cylinder in fluid.

## APPENDIX

EXPERIMENTAL VALUES OF COEFFICIENTS FOR PIPE FLOW, CHANNELS, ORIFICES, AND WEIRS . . . . .	503
---	-----

	PAGE
SUMMARY OF FORMULAE . . . . .	511
INDEX . . . . .	527
