PREFACE	5
CHAPTER 1. PETROLEUM GASES AND NATURAL GASOLINE.....	13
Methods of analysis by fractionation. Determination of olefins. Determination of butadiene and acetylene. Desorption. Determination of non-hydrocarbon constituents. Oil field (natural) gas. Cracked gases. Refinery gases. Natural gasoline. Refinery-gas gasoline.	
CHAPTER 2. PHYSICAL METHODS OF DETERMINING HYDROCARBONS IN DISTILLATES	40
Distillation: Number of theoretical plates. Unpacked (empty) columns. Bubble-type fractionation columns. Packed columns. Centrifugal columns. Adiabaticity of fractionating columns. Reflux. Free space and hold-up. Distillation rate. Procedure of fractionation. High vacuum fractionation. Fractionation under varied pressures. Azeotropic distillation. Procedure of azeotropic distillation. Distillation in molecular stills. Crystallization: Crystallization and separation of petroleum wax. Crystallization and separation of low molecular weight paraffins and other hydrocarbons. Separation by solvent treatment: Procedure of extraction. Extraction of low boiling fractions. Extraction of lubricating fractions. Adsorption and Desorption. Aniline points: Determination of aromatics by aniline points. Determination of paraffins and naphthenes by aniline points. Composition of cracked gasolines and aniline points. Determination of aromatics by specific gravity and refractive index. Determination of paraffins and naphthenes by specific gravity and refractive index. Refractivity intercept method. Specific dispersion. Viscosity index and viscosity-gravity constant. Correlation index. Evaluation of paraffin isomers by boiling range and parachor. Infrared, ultraviolet absorption and Raman effect. Infrared absorption. Ultraviolet absorption. Raman effect. Mass spectrometry. X-ray diagrams.	
CHAPTER 3. CHEMICAL METHODS OF DETERMINING HYDROCARBONS IN DISTILLATES	128
Ultimate analysis and H:C ratio. Ring analysis. Sulfonation of aromatics. Separation of aromatics of gasolines by sulfonation. Separation of aromatics in high boiling fractions by sulfonation. Regeneration of aromatics from sulfonic acids. Nitration. Separation of aromatics with picric acid. Determination of cyclohexanes. Reactions and separation of unsaturates with sulfuric acid. Separation unsaturates and aromatics with sulfuric acid. Separation of aromatics and unsaturates with nitric acid. Reaction of unsaturates with sulfur monochloride. Reaction of unsaturates with halogens. Bromine and iodine numbers. Separation of unsaturates and aromatics with mercurial salts. Hydrogenation of unsaturates. Hydrogenation of aromatics. Separation and identification of	

diolefins by condensation. Reactions of tertiary hydrocarbons with chloro-sulfonic and fuming sulfuric acids. Antimony pentachloride and tertiary hydrocarbons. Oxidation.

- CHAPTER 4. HYDROCARBONS OF STRAIGHT-RUN DISTILLATES 197
 Content of various hydrocarbon classes in straight-run gasolines. Individual hydrocarbons in straight-run gasolines. Hydrocarbons in straight-run kerosenes and gas oils. Ring analysis data. Aromatic hydrocarbons in kerosenes and gas oils. Individual hydrocarbons in straight-run kerosenes. Lubricating oils. Ring analysis of lubricating oils. Aromatic hydrocarbons in lubricating oils. Paraffin hydrocarbons in lubricating oils. Rings of lubricating-oil hydrocarbons. Paraffinic side chains of lubricating-oil hydrocarbons. Cracking of lubricating oils. Individual hydrocarbons in lubricating oils. Synthesis of hydrocarbons with lubricating properties.
- CHAPTER 5. HYDROCARBONS OF SYNTHETIC DISTILLATES..... 252
 Synthetic paraffins. Polymer gasolines. Cracked gasolines. Percentage of various classes of hydrocarbons. Individual hydrocarbons in cracked gasolines. Hydrogenation gasolines. Synthetic gas oils. Synthetic high-boiling fractions. High-boiling fractions produced by cracking. High-boiling fractions produced by hydrogenation. Polymerized high-boiling fractions. Petroleum synthetic resins.
- CHAPTER 6. PETROLEUM WAX..... 284
 Types of petroleum wax. Content of petroleum wax in crude oils and other sources. Normal paraffins in petroleum wax. Isoparaffins in petroleum wax. Cyclic hydrocarbons in petroleum wax. Ozokerite ceresins. Solubility of petroleum waxes in oil products. Pour points of petroleum products containing waxes. Crystalline structure.
- CHAPTER 7. OXYGEN COMPOUNDS 315
 Oxygen compounds preformed and formed by oxidation. Determination and separation of petroleum acids. Separation of phenols and fatty acids. Separation of individual naphthenic acids. Content of petroleum acids in crude oils and distillates. Individual naphthenic acids. Methods of identification. Individual naphthenic acids separated from petroleum. Individual fatty acids in oil products. Individual phenols in oil products. Oxidation of oil products. Determination of oxidation products in cracked gasolines. Content of oxidation products in cracked gasolines. Oxidation reactions in cracked gasolines. Oxidation products of straight-run petroleum oils. Quantitative determination of oxidation products in straight-run oils. Oxidation reactions in straight-run products.
- CHAPTER 8. SULPHUR AND NITROGEN COMPOUNDS..... 350
 Sulfur compounds in petroleum. Determination of the total sulfur. Determination of free sulfur. Determination of hydrogen sulfide and mercaptans. Removal of sulfur compounds with sodium hydroxide. Separation of thiophenols. Separation of sulfur compounds with sulfuric acid. Separation of sulfur compounds with aluminum chloride. Extraction with solvents. Adsorption of sulfur compounds. Treatment with mercury salts. Oxidation and reduction of sulfur compounds. Determina-

tion of sulfur compounds in gasolines. Total sulfur content in crude oils and distillates. Inorganic sulfur compounds. Organic sulfur compounds in petroleum. Individual sulfur compounds in petroleum. Nitrogen compounds in petroleum. Content of nitrogen in crude oils. Methods of separation of nitrogen bases. Nitrogen compounds identified in petroleum.

CHAPTER 9. RESINS AND ASPHALTIC PRODUCTS 385

Classification and general properties. Methods of separation of resinous and asphaltic compounds. Determination of carboids. Determination of asphaltogenic acids and anhydrides. Separation of asphaltenes. Separations of neutral resins. Separation of neutral resins and asphaltenes by liquefied gases. Separation by polar solvents. Properties of neutral resins. Properties of asphaltenes. Resins and asphaltenes in crude oils and distillates. Petroleum asphalts. Structure of petroleum residues and asphalts. Petroleum coke.

CHAPTER 10. CLASSIFICATION OF CRUDE OILS 414

Geological identification of crude oils. Commercial classification. Chemical classification. Paraffinic crude oils. Naphthenic crude oils. Aromatic and asphaltic classes. Paraffinic-naphthenic crude oils. Naphthenic-aromatic crude oils. Mixed asphaltic crude oils.
