Preface to the Second Edition	xi
Preface to the First Edition	xiii
Chapter 1 The Character and Basis of Electronic Intelligence	1
1.1 Electronic Intelligence Defined	1
1.2 Exploring the ELINT Range Advantage	2
1.3 Limitations Due To Noise	4
1.4 Probability of Intercept Problems	5
1.5 Inferring Radar Capabilities From Observed Signal Parameters	7
1.6 Receivers for Radar Interception	10
1.7 Sensitivity of ELINT Receivers	11
1.8 Major ELINT Signal Parameters	16
References	16
Chapter 2 Signal-to-Noise Ratio Considerations for Analog and Digital Systems	19
2.1 Introduction	19
2.2 SNR at the Receiver	19
2.3 Estimating the SNR from Recorded Data	23
2.4 A/D Converter Noise	26
2.5 A/D Conversion Methods	27
2.6 Signal-to-Noise Ratios of Interest	30
2.7 Thresholding with Hysteresis	35
2.8 Screening the Data for Saturation and Quantizing Noise	37
2.9 Interpolation Between Samples	38
References	39
Chapter 3 Signal Power	41
3.1 Power Estimation Through ELINT	41
3.2 Distance to the Horizon	42

3.3	Errors in Pointing the ELINT Antenna	44
3.4	Reception of the Radar Main Beam	47
3.5	Estimating the Distance to the Radar	49
3.6	Multiple Signal and Multipath Problems	52
3.7	Summary of Power Measurement Requirements	54
3.8	Sample ERP Calculations	55
	References	57
Chapter 4	Polarization	59
4.1	Polarization Defined	59
4.2	Elliptical Polarization	59
4.3	Stokes' Parameters	63
4.4	Measuring Polarization	65
4.4.1	Polarization Pattern Method	65
4.4.2	Phase-Amplitude Method	69
4.4.3	Multiple Antenna Method	70
4.5	Cross-Polarization	72
4.6	Propagation Effects	77
4.7	System Aspects of Polarization	78
	References	80
Chapter 5	Beam Analysis	81
5.1	Introduction	81
5.2	Basic Antenna Pattern Relationships	82
5.3	Beam Patterns From ELINT	84
5.4	Beam Patterns of Array Antennas	91
5.5	Summary	95
	References	97
Chapter 6	Antenna Scan Analysis	99
6.1	Introduction	99
6.2	Some Principles of Searching	100
6.3	Relationships Among Scan Rate, Maximum Unambiguous Range, and Energy on Target	101
6.4	Fan Beam Scanning: Circular and Sector	102
6.5	Pencil Beam Scanning: Raster, Helical, and Spiral	110
6.6	Tracking Scans and Monopulse	112
6.7	Electronic Scanning	116
6.8	Scan Measurement and Analysis Techniques	117
6.9	Three-Dimensional Search Example	119
	References	120
Chapter 7	Intrapulse Analysis	121
7.1	Introduction	121
7.2	Pulse Envelope Parameters	122
7.3	Envelope Parameter Measurements	125

7.4	Some Radar Performance Limits Related to Pulse Envelope	131
7.5	Multipath Effects	134
7.6	Intrapulse Frequency and Phase Modulation	136
7.7	Recording and Analyzing Intentionally Modulated Pulses	141
7.8	Incidental Intrapulse Shape—Uses and Causes	141
7.9	Comparing Wave Shapes	143
	References	145
Chapter 8	Pulse Repetition Interval Analysis	147
8.1	Introduction	147
8.2	Common PRI Categories	150
8.2.1	Constant PRI	150
8.2.2	Jittered PRIs	153
8.2.3	Dwell and Switch PRIs	154
8.2.4	PRI Stagger	154
8.2.5	Sliding PRIs	155
8.2.6	Scheduled PRIs	155
8.2.7	Periodic PRI Variations	156
8.2.8	Pulse Groups	156
8.3	Time Interval Measurements	156
8.3.1	SNR Limitations	157
8.3.2	Limitations Due to Pulse Amplitude Changes	160
8.3.3	Improving Interval Measurements	162
8.3.4	Reference Oscillator Limitations	163
8.3.5	Digital Thresholding	165
8.3.6	Average PRI Measurement Using PRI Synthesis	167
8.4	PRI Analysis Techniques	169
8.4.1	Raster Displays	171
8.4.2	Base Band Spectrum Analysis	175
8.4.3	PRI Sounds	177
8.5	Computer-Based PRI Analysis	177
8.5.1	Statistical Techniques	181
8.5.2	Delta- τ Histogram	185
8.6	Interpreting the Results	188
8.6.1	Delay Line PRI Generators	190
8.6.2	Crystal Oscillators and Countdown Circuits	190
8.7	PRIs and Range and Velocity Ambiguities	196
8.8	MTI Radar Blind Speeds	197
8.9	Moving Target Detection	198
	References	198
Chapter 9	Radio Frequency Analysis	199
9.1	Pulsed Signal Carrier Frequency	199
9.1.1	Frequency Measurement Accuracies	199

9.1.2	Doppler Shifts	201
9.1.3	Drift Measurement	201
9.2	Intentional Intrapulse Frequency or Phase Modulation	202
9.2.1	Postdetection Recordings	202
9.2.2	Analog Predetection Recordings	204
9.2.3	Predetection Playback and Analysis	207
9.3	Coherence (Short-Term RF Stability)	208
9.3.1	RMS Phase Fluctuation	212
9.3.2	RMS Frequency Fluctuation	214
9.3.3	Signal Repeatability	216
9.3.4	Effects of Variations in τ_o	219
9.3.5	Frequency-Domain Stability Measures	219
9.3.6	Bandwidth Limitations on Allan Variance Measurements	222
9.3.7	Noise Limitations on Allan Variance Measurements	223
9.3.8	Frequency Stability Measures for Power Law Spectra	226
9.3.9	Sinusoidal FM and Linear Frequency Drift	227
9.3.10	“Short-Look” Problem	228
9.4	Frequency Character of CW Signals	231
9.5	Pulsed Signal Example	232
9.6	Measuring Coherence	235
9.7	Effects on Drift	236
	References	236
Chapter 10	Deinterleaving Pulse Trains	237
10.1	Introduction	237
10.2	Real-Time Techniques (Signal Gating)	237
10.3	Computerized Deinterleaving	240
10.3.1	Interval-Only Algorithms	241
10.3.2	Delta- τ Histogram Applied to Deinterleaving	243
10.3.3	Multiple Parameter Deinterleaving	247
10.3.4	Pulse Amplitude as a Key Parameter	247
10.3.5	Pulse Duration and Carrier Frequency Used for Deinterleaving	248
10.4	Angle of Arrival Used for Deinterleaving	249
	References	249
Chapter 11	Determining ELINT Parameter Limits	251
11.1	Introduction	251
11.2	Histograms Used to Determine Parameter Limits	251
11.3	Types of Histograms	255
11.4	Two-Sigma Parameter Limits	259
11.5	Histogram Analysis Techniques	262

11.5.1	Parameter Limits Example	262
11.5.2	Intercepts Separated into Accuracy Classes	263
11.5.3	Most Probable Values	265
11.6	Analysis Problems	267
11.6.1	Signal Identification Errors	267
11.6.2	Transforming Parameters and Their Accuracies	267
11.7	Histogram Analysis Summary	269
	References	270
Chapter 12	ELINT Data Files	271
12.1	Introduction	271
12.2	Signal Identification	272
12.3	ELINT Data for RWR Design	273
12.4	Adding Non-ELINT Data	275
12.5	Summary	275
	References	276
Appendix A	Notes on In-Phase and Quadrature FM Demodulation	277
A.1	Summary	277
A.2	Introduction	278
A.3	Relationships of the i and q Signals	278
A.4	Obtaining $i(t)$ and $q(t)$	283
A.5	Demodulation Using i and q	288
A.6	Effects of Ideal Limiters	293
A.7	Quantizing Effects on i and q FM Demodulation	299
A.8	Relationships to the IFM	300
	References	303
Appendix B	Some ELINT Considerations of FM Signals	305
B.1	Introduction	305
B.2	Effects of a Tonal (Sinusoidal) Spectral Component on Phase- and Frequency-Demodulated Signals	305
B.3	Circular (Sinusoidal) Frequency-Modulated Signals	308
B.4	Carson's Rule	311
B.5	Modification of Carson's Rule for ELINT Applications	312
B.6	CFM Demodulation Signal Degradation by RF Band Limiting	315
B.7	Effects of Noise on FM Demodulated Signals	321
	References	324
Appendix C	Spectrum Widths: 3-dB and First Nulls for Trapezoidal Pulses	325
C.1	Introduction	325
C.2	Rectangular Pulses	325
C.3	Trapezoidal Pulses—Equal Rise and Fall Time	325
C.4	Trapezoidal Pulses—Unequal Rise and Fall Time	327
