<b>Preface</b>	<b>v</b>
<b>PART 1 RANDOM SIGNALS BACKGROUND</b>	<b>1</b>
<b>1 Probability and Random Variables: A Review</b>	<b>3</b>
1.1 Random Signals	3
1.2 Intuitive Notion of Probability	4
1.3 Axiomatic Probability	5
1.4 Random Variables	8
1.5 Joint and Conditional Probability, Bayes Rule and Independence	9
1.6 Continuous Random Variables and Probability Density Function	13
1.7 Expectation, Averages, and Characteristic Function	15
1.8 Normal or Gaussian Random Variables	18
1.9 Impulsive Probability Density Functions	22
1.10 Joint Continuous Random Variables	23
1.11 Correlation, Covariance, and Orthogonality	26
1.12 Sum of Independent Random Variables and Tendency Toward Normal Distribution	28
1.13 Transformation of Random Variables	32
1.14 Multivariate Normal Density Function	37
1.15 Linear Transformation and General Properties of Normal Random Variables	40
1.16 Limits, Convergence, and Unbiased Estimators	43
1.17 A Note on Statistical Estimators	46

## 2 Mathematical Description of Random Signals 57

- 2.1 Concept of a Random Process 57
- 2.2 Probabilistic Description of a Random Process 60
- 2.3 Gaussian Random Process 62
- 2.4 Stationarity, Ergodicity, and Classification of Processes 63
- 2.5 Autocorrelation Function 65
- 2.6 Crosscorrelation Function 68
- 2.7 Power Spectral Density Function 70
- 2.8 White Noise 75
- 2.9 Gauss–Markov Processes 77
- 2.10 Narrowband Gaussian Process 81
- 2.11 Wiener or Brownian-Motion Process 83
- 2.12 Pseudorandom Signals 86
- 2.13 Determination of Autocorrelation and Spectral Density Functions from Experimental Data 90
- 2.14 Sampling Theorem 95

## 3 Linear Systems Response, State-Space Modeling, and Monte Carlo Simulation 105

- 3.1 Introduction: The Analysis Problem 105
- 3.2 Stationary (Steady-State) Analysis 106
- 3.3 Integral Tables for Computing Mean-Square Value 109
- 3.4 Pure White Noise and Bandlimited Systems 110
- 3.5 Noise Equivalent Bandwidth 111
- 3.6 Shaping Filter 113
- 3.7 Nonstationary (Transient) Analysis 114
- 3.8 Note on Units and Unity White Noise 118
- 3.9 Vector Description of Random Processes 121
- 3.10 Monte Carlo Simulation of Discrete-Time Processes 128
- 3.11 Summary 130

## PART 2 KALMAN FILTERING AND APPLICATIONS 139

## 4 Discrete Kalman Filter Basics 141

- 4.1 A Simple Recursive Example 141
- 4.2 The Discrete Kalman Filter 143

4.3	Simple Kalman Filter Examples and Augmenting the State Vector	148
4.4	Marine Navigation Application with Multiple-Inputs/Multiple-Outputs	151
4.5	Gaussian Monte Carlo Examples	154
4.6	Prediction	159
4.7	The Conditional Density Viewpoint	162
4.8	Re-cap and Special Note On Updating the Error Covariance Matrix	165

## **5 Intermediate Topics on Kalman Filtering 173**

5.1	Alternative Form of the Discrete Kalman Filter – the Information Filter	173
5.2	Processing the Measurements One at a Time	176
5.3	Orthogonality Principle	178
5.4	Divergence Problems	181
5.5	Suboptimal Error Analysis	184
5.6	Reduced-Order Suboptimality	188
5.7	Square-Root Filtering and U-D Factorization	193
5.8	Kalman Filter Stability	197
5.9	Relationship to Deterministic Least Squares Estimation	198
5.10	Deterministic Inputs	201

## **6 Smoothing and Further Intermediate Topics 207**

6.1	Classification of smoothing Problems	207
6.2	Discrete Fixed-Interval Smoothing	208
6.3	Discrete Fixed-Point Smoothing	212
6.4	Discrete Fixed-Lag Smoothing	213
6.5	Adaptive Kalman Filter (Multiple Model Adaptive Estimator)	216
6.6	Correlated Process and Measurement Noise for the Discrete Filter—Delayed-State Filter Algorithm	226
6.7	Decentralized Kalman Filtering	231
6.8	Difficulty with Hard-Bandlimited Processes	234
6.9	The Recursive Bayesian Filter	237

## **7 Linearization, Nonlinear Filtering, and Sampling Bayesian Filters 249**

7.1	Linearization	249
7.2	The Extended Kalman Filter	257
7.3	“Beyond the Kalman Filter”	260

7.4	The Ensemble Kalman Filter	262
7.5	The Unscented Kalman Filter	265
7.6	The Particle Filter	269

## **8 The “Go-Free” Concept, Complementary Filter, and Aided Inertial Examples 284**

8.1	Introduction: Why Go Free of Anything?	284
8.2	Simple GPS Clock Bias Model	285
8.3	Euler/Goad Experiment	287
8.4	Reprise: GPS Clock-Bias Model Revisited	289
8.5	The Complementary Filter	290
8.6	Simple Complementary Filter: Intuitive Method	292
8.7	Kalman Filter Approach—Error Model	294
8.8	Kalman Filter Approach—Total Model	296
8.9	Go-Free Monte Carlo Simulation	298
8.10	INS Error Models	303
8.11	Aiding with Positioning Measurements—INS/DME Measurement Model	307
8.12	Other Integration Considerations and Concluding Remarks	309

## **9 Kalman Filter Applications to the GPS and Other Navigation Systems 318**

9.1	Position Determination with GPS	318
9.2	The Observables	321
9.3	Basic Position and Time Process Models	324
9.4	Modeling of Different Carrier Phase Measurements and Ranging Errors	330
9.5	GPS-Aided Inertial Error Models	339
9.6	Communication Link Ranging and Timing	345
9.7	Simultaneous Localization and Mapping (SLAM)	348
9.8	Closing Remarks	352

## **APPENDIX A Laplace and Fourier Transforms 365**

## **APPENDIX B The Continuous Kalman Filter 371**

## **Index 379**
