Preface	v
----------------	----------

Part I Introduction

1 Management: What and Why	3
1.1 The network decade	3
1.2 Distributed versus networked systems	4
1.3 What is management	5
1.4 Management example	6
1.4.1 The scenario	6
1.4.2 Required management	6
1.5 Why do we need management?	8
1.6 Evolution of management	9
1.7 Book structure	10
Abbreviations	12
References	13

Part II Enabling Technologies

2 Network Technologies	17
2.1 Network classification and standards evolution	17
2.2 Local area networks	22
2.2.1 CSMA/CD Ethernet	25
2.2.2 Token ring	26
2.2.3 Token bus	29
2.2.4 Protocols	30
2.2.5 FDDI	30
2.2.6 Bridges	31
2.2.7 Remote bridges	34
2.3 Metropolitan area networks	34
2.4 Wide area network	37
2.4.1 Packet-switched networks	37

2.4.2	Integrated services digital networks (ISDN)	39
2.4.3	Private network	39
2.5	Internetworks	40
2.5.1	Addresses	41
2.5.2	Network layer structure	42
2.5.3	Routing	43
2.6	Summary	44
	Abbreviations	45
	Bibliography and further reading	45
3	Distributed Systems	47
3.1	What is a distributed system?	48
3.2	Distributed applications	49
3.3	Distributed system architecture	52
3.4	Language-level software structure	54
3.4.1	Software components	54
3.4.2	Interfaces	54
3.4.3	Component instantiation and interconnection	55
3.4.4	Dynamic binding	56
3.5	Language-level communication primitives	57
3.5.1	Message receipt	57
3.5.2	Message send	58
3.6	A simplified (network monitoring) example	61
3.7	Some issues common to all layers	62
3.7.1	Naming	62
3.7.2	Synchronization	63
3.7.3	Error control	63
3.7.4	Resource management	63
3.8	Conclusions	64
	Abbreviations	64
	References	64

Part III Models and Standards for Management

4	OSI Management Model and Standards	69
4.1	Management standards in the OSI context	69
4.2	Systems management and its architecture	73
4.3	Supporting services for management	76
4.3.1	Event handling	77
4.3.2	Logging	78
4.3.3	Access control	79
4.4	Systems management function standards	79
4.4.1	Configuration management	80
4.4.2	Alarm reporting	82

4.4.3	Fault management	83
4.4.4	Audit trails	83
4.4.5	Performance management	83
4.4.6	Accounting management	84
4.4.7	Other functions	84
4.5	Systems management communications	85
4.5.1	The Common Management Information Service	85
4.5.2	The Common Management Information Protocol	87
4.6	Other activities relating to OSI management	90
4.7	Open issues	91
	Abbreviations	92
	References	92
5	OSI Structure of Management Information	95
5.1	Introduction	95
5.1.1	What is management information	95
5.1.2	The SMI standards	97
5.2	The management information model	98
5.2.1	The purpose of the information model	98
5.3	Managed objects	99
5.3.1	Managed objects in context	99
5.3.2	The concept of a managed object	102
5.3.3	More general object models	103
5.4	Defining managed objects	106
5.4.1	Managed object classes	106
5.4.2	Packages	106
5.4.3	Inheritance	108
5.4.4	Generic managed object definitions	109
5.5	Managed object attributes	109
5.5.1	Single attributes	109
5.5.2	Attribute group	110
5.6	Management operation	110
5.6.1	General-purpose operations on attributes	111
5.6.2	Operations on managed objects as a whole	111
5.6.3	Multiple operations and synchronization	113
5.7	Notifications	114
5.8	Names and containment	115
5.8.1	Names of properties of managed objects	115
5.8.2	Containment	115
5.8.3	Name structure	116
5.8.4	The local form	116
5.8.5	The global part	117
5.8.6	A naming example	117
5.8.7	Name bindings	119
5.9	Support for management knowledge	120
5.10	Compatibility and allomorphism	121

5.10.1	Requirements and approach	121
5.10.2	Variation within managed object classes	122
5.10.3	Compatibility	122
5.10.4	Best-efforts management	123
5.10.5	Allomorphism	124
5.10.6	Remarks	125
5.11	Relationship with Directory standards	125
5.12	Documentation of management information	126
5.12.1	The Definition of Management Information	127
5.12.2	Generic Management Information	127
	Abbreviations	128
	References	129
6	Guidelines for the Definition of Managed Objects	131
6.1	The purpose of the guidelines	131
6.2	Guidance to managed object definers	132
6.2.1	General principles	132
6.2.2	Global issues	133
6.2.3	A concrete realization of the Management Information Model	134
6.3	Introduction to the notation	135
6.3.1	Templates	135
6.3.2	References between templates	135
6.3.3	In-line templates	136
6.3.4	References to ASN.1 modules	136
6.4	The templates	137
6.4.1	Elements of a managed object class definition	137
6.4.2	Managed object class template	137
6.4.3	Package template	139
6.4.4	Parameter template	142
6.4.5	Attribute template	145
6.4.6	Attribute group template	147
6.4.7	Behaviour template	149
6.4.8	Action template	149
6.4.9	Notification template	151
6.4.10	Name binding template	152
6.5	Relationship between managed object	154
6.6	Using the templates	155
6.6.1	The template "meta-language"	156
6.7	Example of a managed object class	157
	Abbreviations	163
	References	164
7	Simple Network Management Protocol	165
7.1	Background	165
7.1.1	The origins of TCP/IP network management	165

7.1.2	The evolution of SNMP	167
7.1.3	SNMP-related standards	169
7.2	Basic concepts	170
7.2.1	Network management	170
7.2.2	Network management protocol architecture	172
7.2.3	Trap-directed polling	173
7.2.4	Proxies	173
7.3	SNMPv2	174
7.3.1	The elements of SNMPv2	176
7.3.2	Structure of management information	177
7.3.3	Protocol operation	180
7.3.4	SNMPv2 management information base	184
7.4	SNMPv2 security	185
7.4.1	SNMPv2 parties	186
7.4.2	Message format	186
7.4.3	Privacy	189
7.4.4	Authentication	190
7.4.5	Clock synchronization	193
7.4.6	Access control	194
7.5	SNMPv1, SNMPv2, and CMIP	194
7.6	What have we gained?	195
	Abbreviations	195
	References	196
8	Comparison of SNMP and CMIP Management Architectures	197
8.1	Introduction	197
8.2	Comparison criteria	199
8.3	Information structure	200
8.3.1	Information-structuring methodology	200
8.3.2	Object naming	208
8.3.3	Data representation	210
8.3.4	Relationship representation	211
8.4	Management functions	212
8.5	Underlying communications	213
8.5.1	SNMP communications	213
8.5.2	CMIP communications	214
8.6	Conclusion	214
	Abbreviations	215
	References	215
9	The Telecommunications Management Network (TMN)	217
9.1	Introduction	217
9.2	TMN objectives	219
9.3	TMN activities	221
9.4	TMN applications	223

9.5	TMN functional architecture	225
9.6	TMN physical architecture	229
9.7	TMN management information	231
9.8	Generic network information model	233
9.9	TMN management implementation	234
9.10	Future TMN activities	236
9.11	Closing comment	237
	Abbreviations	237
	References	238

Part IV Management Functions

10	Name Management and Directory Services	247
10.1	Introduction: the problem of object identification	247
10.2	The evolution of naming schemes	248
10.2.1	Terminology	248
10.2.2	Historical perspectives in naming	249
10.2.3	Distinguished names and X.500	250
10.2.4	Distinguished names at the user interface	252
10.2.5	Other forms of "names": object and universal identifiers	253
10.3	Support mechanisms for naming: directory services	255
10.3.1	Definition of centralized and distributed directory	255
10.3.2	The X.500 directory standard	256
10.3.3	Distributed directory operation: an example	260
10.4	Operational aspects of naming	261
10.4.1	Unification of naming spaces	262
10.4.2	Design of a structured name space	264
10.4.3	Construction and operation of the distributed directory	267
10.5	The challenges of future global naming	269
10.6	Summary	270
	Abbreviations	270
	References	271
11	Quality of Service Management in Distributed Systems	273
11.1	Introduction	273
11.2	Fundamental concepts	274
11.2.1	Activities, dimensions and categories	274
11.2.2	QoS management	275
11.3	QoS in standards	278
11.3.1	ISO's reference model for Open Systems Interconnection	278
11.3.2	CCITT I-series recommendations	280
11.3.3	Evaluation	281
11.4	Layer-specific QoS	282
11.4.1	Network layer	282

11.4.2	Transport layer	283
11.4.3	Operating system layer	285
11.4.4	Distributed systems platform	289
11.5	Towards an integrated view of QoS	291
11.5.1	SC21 QoS framework	291
11.5.2	Quality of Service Architecture	293
11.5.3	Other QoS research	294
11.6	Conclusion	295
	Abbreviations	296
	References	296
12	Monitoring Distributed Systems	303
12.1	Introduction	303
12.1.1	What is monitoring	303
12.1.2	Concepts and terminology	304
12.1.3	Monitoring model	307
12.2	Generation of monitoring information	309
12.2.1	Status reporting	309
12.2.2	Event detection and reporting	310
12.2.3	Trace generation	311
12.3	Processing of monitoring information	313
12.3.1	Merging	313
12.3.2	Validation of monitoring information	315
12.3.3	Database updating	316
12.3.4	Combination of monitoring information	316
12.3.5	Filtering of monitoring information	319
12.3.6	Analysis of monitoring information	320
12.4	Dissemination of monitoring information	321
12.5	Presentation of monitoring information	322
12.6	Implementation issues	324
12.6.1	Intrusiveness	324
12.6.2	Global state, time and ordering of events	326
12.7	Some existing monitoring systems	329
12.7.1	ZM4/SIMPLE	329
12.7.2	Meta	333
12.7.3	Monitoring database	335
12.8	OSI management standards	337
12.8.1	OSI	337
12.8.2	Generation of monitoring information	338
12.8.3	Event reporting service	339
12.8.4	Log service	341
12.8.4	Processing of monitoring information	342
12.8.5	Discussion	343
12.9	Summary	343
	Abbreviations	344
	References	344

13 Network Planning	349
13.1 Introduction	349
13.2 Communication networks – fundamental problems and performance measures	353
13.3 The planning process	355
13.4 Monitoring	357
13.4.1 Network monitoring	358
13.4.2 System monitoring	360
13.5 Modeling techniques	361
13.5.1 Performance modeling	361
13.5.2 Modeling and evaluation techniques	363
13.6 Selection of techniques and tools	367
13.7 Synthesis	368
13.7.1 Overview	368
13.7.2 Mathematical formulation and classification	369
13.7.3 Exact methods	369
13.7.4 Heuristic	373
Abbreviations	376
References	377
14 User Administration and Accounting	381
14.1 Administration overview	382
14.1.1 Services	382
14.1.2 Users	382
14.1.3 Administrative functions	383
14.1.4 Administrative data	385
14.2 Usage accounting overview	386
14.2.1 Resource usage accounting	387
14.2.2 Service usage accounting	387
14.3 Usage accounting mechanisms	389
14.3.1 Basic model	389
14.3.2 Monitoring and metering	390
14.3.3 Logging	391
14.4 Billing and charging	391
14.4.1 Commercial billing	391
14.4.2 Charge generation	392
14.5 Payment and quotas	394
14.6 Usage reconciliation	395
14.6.1 International telephone reconciliation	396
14.6.2 Pan-European reconciliation	397
14.6.3 The clearing house	398
14.6.4 Roaming while a call is in progress	399
14.7 Summary	401
Abbreviations	401
References	402

15 Security for Management and Management of Security	403
15.1 Introduction	403
15.2 Network security services	406
15.3 Network security mechanisms	408
15.3.1 Cryptography	409
15.3.2 Confidentiality	410
15.3.3 Integrity	410
15.3.4 Authentication	411
15.3.5 Access control	414
15.3.6 Positioning of security mechanisms within layers	415
15.4 Network security management	416
15.4.1 Key management	416
15.4.2 Authentication management	419
15.4.3 Access control management	420
15.4.4 Notarization	420
15.4.5 Auditing	421
15.5 Security management and network management	422
15.5.1 Network management security	422
15.5.2 Supportive security applications	422
15.5.3 Security management context	423
15.6 Summary	424
Abbreviations	424
References	425

Part V Management Policy

16 Domains: A Framework for Structuring Management Policy	433
16.1 Requirements for management of large distributed systems	433
16.2 Domains	435
16.2.1 Concepts	435
16.2.2 Domain relationships	436
16.3 Managers and managed objects	437
16.4 Management relationships	439
16.4.1	439
16.4.2 Representing users	441
16.4.3 Manager positions	441
16.5 Application to configuration management	442
16.6 Inter-organizational domains	445
16.7 Domain service	447
16.7.1 User and mechanism views	448
16.7.2 Object references	449
16.7.3 Domain operations	449
16.7.4 Implementation	450

16.8	Related work	451
16.9	Summary	452
	Abbreviations	452
	References	453
17	Specification of Management Policies and Discretionary Access Control	455
17.1	Management policies	456
17.1.1	The need to model policies	458
17.1.2	Characteristics of management action policies	458
17.1.3	Policy attributes	459
17.1.4	Representing management action policies as objects	460
17.1.5	Relationships between management action policies	461
17.1.6	Other classes of policy	464
17.2	Discretionary access control	465
17.2.1	Access rules	466
17.2.2	Example of access rules	468
17.2.3	Removal of access	469
17.2.4	Implementation issues	470
17.2.5	Domino implementation approach	472
17.3	Delegation of authority	473
17.3.1	Management role	474
17.3.2	Delegation of authority using management role objects	475
17.3.3	Management role objects	476
17.4	Summary	479
	Abbreviations	479
	References	479

Part VI Implementing Management

18	Configuration of Distributed Systems	483
18.1	Components	483
18.2	Client-server systems	484
18.3	Static configuration:	486
18.4	Dynamic configuration	489
18.4.1	Dynamic component instantiation	490
18.4.2	Lazy instantiation	491
18.5	Dynamic configuration – evolutionary change	492
	Change operations	493
18.6	Configuration and open systems	494
18.7	Conclusion	496
	References	497

19	Application of Commercial Databases to Management	499
19.1	Review of data model	499
19.1.1	CODASYL data model	500
19.1.2	Relational data model	501
19.1.3	Semantic model	502
19.1.4	Object-oriented model	503
19.2	Commercially available database	503
19.2.1	Centralized database systems	503
19.2.2	Distributed database systems	504
19.2.3	Database standards	504
19.3	Case study of database system design	506
19.3.1	Database design process	506
19.3.2	Conceptual design example	510
19.3.3	Logical design for a relational data model	512
	References	515
20	Graphical Management Interfaces	517
20.1	The purpose of a GMI: what should it try to achieve?	517
20.2	Human factors considerations: the conceptual framework and expected behaviors	518
20.2.1	User interaction: the object-action paradigm	518
20.2.2	Providing information to the GMI user	519
20.2.3	Providing control to the GMI user	522
20.2.4	Making the GMI usable: consistency and standards	524
20.3	A model for the GMI: what is inside	526
20.3.1	Major functional components	526
20.3.2	The Roles Integration Module	528
20.3.3	The Views Presentation Module	530
20.3.4	The Dialog Presentation Module	532
20.3.5	Additional features	534
20.4	Integration of applications with the GMI	534
20.4.1	Separation of presentation from the semantics	534
20.4.2	Levels of integration	535
20.4.3	Means for inter-application communication	536
20.5	Summary	536
	Abbreviations	537
	References	537
21	Artificial Intelligence in Support of Distributed Network Management	539
21.1	Introduction	539
21.2	Artificial intelligence (AI) technologies	540
21.2.1	Expert systems in support of network operation	541
21.3	Expert system limitations and the need for enabling technologies	545
21.4	Enabling knowledge technologies	546

21.4.1	Providing interoperability through distributed object management	549
21.4.2	Distributed artificial intelligence	553
21.4.3	Powerful knowledge representation	558
21.4.4	Machine learning for adapting self-improving systems	562
21.5	Technology trends in the future network	569
21.5.1	The ultimate network and its evolution	569
21.5.2	An autonomous network scenario	570
21.6	Summary	571
	Abbreviations	573
	References	573

Part VII Case Studies

22	Digital Equipment Corporation's Enterprise Management Architecture	581
22.1	The purpose of EMA	581
22.2	The EMA model	582
22.2.1	Directors	583
22.2.2	Entities	584
22.2.3	Common Agent	584
22.2.4	DECMcc	585
22.3	The goals of EMA and their implications	586
22.3.1	Integration	586
22.3.2	Heterogeneity, standards, and interoperability	587
22.3.3	Dynamic extensibility	588
22.3.4	Open, architected application programming interface	589
22.4	DECMcc director	589
22.4.1	Management modules	589
22.4.2	Management information	591
22.4.3	Intermodule calling (mcc_call	593
22.4.4	Reusing DECMcc management module services	594
22.4.5	DECMcc as a distributed application	595
22.4.6	Management domains	596
22.5	DECMcc modules	596
22.5.1	Access modules	597
22.5.2	Function modules	598
22.5.3	Presentation modules	600
22.5.4	Agent PMs and AMs	601
22.6	"What you get for free"	601
22.7	Conclusions	602
	Abbreviations	602
	References	603

23 DME Framework and Design	605
23.1 The DME framework	605
23.1.1 Scalability	606
23.1.2 System and network management	607
23.1.3 A coherent user interface	607
23.1.4 Interoperability	607
23.1.5 Distributed management as distributed objects	608
23.2 High-level overview of the architecture	608
23.2.1 Related standards and environments	609
23.2.2 Reconciling environments	611
23.2.3 Object framework infrastructure	611
23.2.4 Object services	613
23.2.5 Management services	614
23.3 Implementation of the DME framework	617
23.3.1 Object references	617
23.3.2 DCE client-side enhancements	618
23.3.3 DCE server-side enhancements	621
23.3.4 Object services	622
23.4 Development approach	625
Abbreviations	626
References	627
24 Managing Change	629
24.1 Introduction	629
24.2 ARCHETYPE	630
24.2.1 AEL Principles	631
24.2.2 AAL Principles	631
24.3 MetaWindow	632
24.3.1 Design with Metawindow	632
24.3.2 Compiling and monitoring	638
24.4 OSI	640
24.4.1 Service access points (SAPs)	640
24.4.2 Peer-to-peer protocols	642
