

# CONTENTS

	PAGE
PREFACE . . . . .	V
CHAPTER I	
INTRODUCTORY . . . . .	1
The electrical circuit—Conductors and insulators— Current, voltage, and resistance—Ammeters and volt- meters—Ohm's Law—E.m.f. and voltage drop.	
CHAPTER II	
ELECTRICAL POWER . . . . .	11
Measurement of power: the watt, wattage, and candle power of lamps—Calculations affecting lamp and resis- tance rheostats—Measurement of energy: the "unit" —Cost of charging and tables.	
CHAPTER III	
PRODUCTION OF ELECTRICAL ENERGY . . . . .	22
Primary cell—Effects of electric current—Lead-acid cell: Planté plates, pasted plates.	
CHAPTER IV	
THE EFFECTS OF CHARGE AND DISCHARGE . . . . .	29
Effect on specific gravity, voltage, colour of plates— Diffusion of electrolyte—Hydrometers—Topping with water—Dope.	
CHAPTER V	
CAPACITY . . . . .	36
Capacity and quantity of active material—Discharge rate—Density of electrolyte—Temperature—Age—Con- tinuous and intermittent capacity.	
CHAPTER VI	
MODERN ACCUMULATORS . . . . .	40
General description—Car batteries: general treatment— The careful driver—Starting of engine—Tests—Freezing of electrolyte—Wireless batteries: high and low tension, sizes required—High rate tester—Motor-cycle batteries.	

## CHAPTER VII

PAGE

## BATTERY CHARGING ON D.C. SUPPLY CIRCUITS . . . 54

Direct current and rectified alternating current—Determining polarity of mains and battery—Series and parallel connection of cells—Methods of charging—Constant current charging—Lamp and resistance, current tables—Charging from home mains—Various types of series charging boards—Parallel battery charging—Two- and three-wire earthed systems—Indications of full charge—Capacity test—Discharge board—Charging rates—Overcharging—Undercharging—Gassing—Correcting specific gravity and temperature—Specific gravity thermometer—Emptying acid—First charges—Mixed battery charging—Trickle charges—L.T. and H.T.—Portable batteries—Dry and jelly-acid types—Laying up—Generator methods of charging, motor generator and rotary transformer—Constant potential charging—Electric vehicle batteries—Hints for operators.

## CHAPTER VIII

## CHARGING FROM ALTERNATING CURRENT CIRCUITS . 110

Types of rectifiers and converters—Mercury arc, Westalite.

## CHAPTER IX

## DISEASES AND THEIR TREATMENT . . . 117

Sulphating—De-sulphating agents—Buckling—Short circuits—Loss of capacity—Shedding—Removing sludge—High and low specific gravity—Temperature trouble.

## CHAPTER X

## REPAIRS AND WORKSHOP . . . 129

Opening out battery—Removing connecting straps, compound, and covers—Examination of plates—Straightening—Replacing units and electrolyte—Welding lead connecting straps with blow pipe and soldering iron—Celluloid batteries—Pasting grids—Precautions for operators.

## CHAPTER XI

## ALKALINE CELLS . . . 138

Edison iron-nickel, and "NIFE" cadmium-nickel cells—Characteristics and treatment.

## CHAPTER XII

PAGE

COUNTRY HOUSE, PRIVATE, AND EMERGENCY PLANTS .	152
--	-----

Emergency batteries for cinemas, etc.

APPENDIX I . . . . .	166
----------------------	-----

Cadmium test.

APPENDIX II . . . . .	168
-----------------------	-----

Motor vehicle electrician's course syllabus, City and  
Guilds Examination questions.

APPENDIX III . . . . .	177
------------------------	-----

Miners' electric safety lamps, care and maintenance

INDEX . . . . .	191
-----------------	-----
