

CONTENTS

Foreword reviews	7
<i>A. Sładkowski</i>	
Introduction	11
Chapter 1	
<i>R. Fellner, A. Fellner, M. Hromádka</i>	
Precision approach with GNSS and bird hazard management in the aspect of air traffic management	15
1. The GNSS in airspace management	15
1.1. Differential GNSS – first step into better approaches	15
1.2. Operations using Aircraft-Based Augmentation System (ABAS)	17
1.3. Operations using Satellite-Based Augmentation System (SBAS)	18
1.4. Operations using Ground-Based Augmentation System (GBAS)	19
2. GNSS in Polish aviation	20
2.1. Satellite navigation systems for air traffic management	21
2.2. Parameters for military air traffic control system	22
3. Perspectives of the transport in EUPOS program	24
4. EGNOS system in APV	27
5. Bird hazard management and bird strike analysis of European airports	31
5.1. Bird strike consequences	33
5.2. Regulations, requirements	35
5.2.1. Manufacturing requirements	35
5.2.2. Regulations	37
6. Measures to mitigate the bird threat	39
6.1. Passive management	39
6.2. Active management	41
6.3. Supportive measures	43
7. Bird strikes in numbers	44
8. Conclusions	46
References	48
Chapter 2	
<i>A. Kulik, K. Dergachov</i>	
Aviation safety. Role of avionic system in safety providing	51
1. Modern ideas about aviation safety	51
2. The role of avionics systems in ensuring of safety operation aircraft	53
2.1. Functional tasks of avionics	53
2.2. Design of safest avionic systems based on the principles of rational control	55
2.3. Avionics systems as rational control systems	58
2.3.1. Main features of the rational control	58
2.3.2. Models of the rational control objects	60
2.3.3. The diagnosing of operability	61
2.3.4. Operability recovery	63

2.3.5. Experimental researches	64
3. Conclusions.....	66
References.....	67

Chapter 3

J. Filipczyk

Technical state of vehicles in the aspects of securing safety in road traffic.....	69
1. Types and causes of road vehicle collisions	69
2. Technical factors in accident	72
3. Faults of vehicles important for traffic safety.....	73
3.1. Faults of passenger cars.....	73
3.1.1. Methods of inspections	73
3.1.2. Examination results.....	74
3.2. Faults of busses	75
3.2.1. Methods of inspections	75
3.2.2. Examination results.....	76
3.3. Faults of duty vehicles.....	78
3.3.1. Methods of inspections	78
3.3.2. Examination results.....	79
4. Discussion.....	80
5. Conclusions.....	81
References.....	82

Chapter 4

R. Burdzik, Ł. Konieczny

New methods for identification of technical condition of vehicle suspension in term of driving safety	83
1. Tests of shock absorber efficiency.....	83
2. The influence of value of pressure in tires on results of research of shock-absorbers in vehicles controls stations	85
3. The influence of technical condition of shock absorbers on driving safety.....	92
4. Conclusions.....	103
References.....	103

Chapter 5

M. Flekiewicz, T. Matyja

Construction and validation of the shells of the automotive toroidal LPG tanks safe in operation	105
1. Tank for fuel - the most critical part of the LPG installation.....	105
2. Typical shapes of the shells and their modification.....	106
3. Legal and technical requirements for the construction of LPG tanks	108
4. Preliminary analytical calculations	110
5. Evaluation of the stress and strain state using FEM	121
5.1. Selection of the calculation model	121
5.2. Modeling of the material	123
5.3. The material hardening phenomenon	125
5.4. An example of the structural analysis of toroidal container by FEM.....	125
5.4.1. Main dimensions of the container.....	125
5.4.2. Main mechanical properties of the container material.....	127
5.4.3. Analytically calculations	128

5.4.4. Description of FEM calculation model.....	128
5.4.5. Results of numerical simulation.....	131
6. Optimal design of tank structure.....	138
7. Verification FEM calculations during pressure tests.....	142
7.1. Measurements of displacements of the shells and the inner pipe (test pressure).....	142
7.2. Measurements of the volume increase and the burst pressure.....	146
8. The influence of temperature on the strength of the tank (fire testing).....	147
8.1. Background of the material behavior in high temperature.....	147
8.2. Fire test of pressurized container.....	150
9. Fatigue tests.....	153
10. Conclusions.....	154
References.....	155

Chapter 6

R. Doleček, O. Černý

Vehicle with independent rotating wheels driven by PMSM from the viewpoint of safe light transport.....	157
1. New trends in the design of city trams.....	157
2. Design of experimental rail vehicle with PMSMs.....	158
3. Testing stand with PMSM.....	160
4. PMSM control.....	162
4.1. Control algorithms for PMSM.....	164
4.2. The results for PMSM control.....	165
5. Weakening mode of PMSM control.....	170
5.1. Characteristics of traction.....	170
5.2. The results for weakening mode of PMSM control.....	171
6. EMC of PMSM as traction drive.....	175
6.1. The experiment results for problems of harmonics.....	176
6.2. The simulation results of problems of disturbing effects.....	179
7. Electric equipment of the experimental rail vehicle.....	182
8. Conclusions.....	184
9. Acknowledgements.....	184
References.....	184

Chapter 7

S. Belodedenko, V. Gamush

Models of technical safety and risk at the estimation and prediction of the condition of vehicles mechanical systems.....	187
1. Areas of application of sample pieces of safety.....	187
2. The concept of admissible risk and a resource sample piece of safety at gradual refusals.....	189
3. A safety index at instant refusals.....	192
4. Availability index of product of carriages transport means.....	194
5. Probe of strength and a fatigue resistance sample piece girders of frame constructions after the operation.....	199
6. Determination of the distribution function of durability and safety indexes.....	205
7. Conclusions.....	210
References.....	211

Chapter 8

A. Grządziela, C. Specht

Safety of sea transport	213
1. The regulatory framework of maritime safety	213
2. The marine environment	221
3. Problems of flotation and stability	227
4. Problems of navigation and safety of sea transportation	227
5. Sea water pollutions	235
6. Conclusions	239
References	239

Chapter 9

D. Gąska, T. Haniszewski, J. Margielewicz

The product safety issues at the design and use of cranes	243
1. Causes and examples of accidents	243
2. Safety issues on the design of cranes	249
3. The mechanical and electronical systems to improve the safety of cranes	255
4. Safety issues in the use phase of cranes	259
5. Conclusions	267
References	267

Chapter 10

T. Opasiak

Safety of belt conveyors transport	271
1. Circumstances of work-related accidents belt conveyors	271
1.1. Circumstances accidents of working belt conveyors	272
1.2. Current state of law with work of belt conveyors	274
2. Main risk of accidents due to construction of a belt conveyor	275
2.1. Design and operation of belt conveyors	275
2.2. Protection against direct threat of mechanical parts of belt conveyors	276
3. Research and design related to operational safety of belt conveyors	276
3.1. A safety brake applied to the throw-off carriage of a belt conveyor	276
3.1.1. Calculation of forces in the throw-off carriage	277
3.1.2. Construction and effectiveness of the safety brake	278
3.1.3. Calculate the volume of the thruster to the safety brake of the throw-off carriage	279
3.2. Neutralization of dust on a unload drum of a belt conveyor	279
3.2.1. Prevention of dust on road of a belt conveyor, during transport by means of a pipe conveyor with closed belt	280
3.2.2. Prevention of dustiness on a unloading station of belt conveyors ...	281
3.3. Cleaning of belt conveyors by a scraper with cemented carbide	283
3.3.1. Test of the effectiveness of the conveyor belt cleaning by a scrap- er bar with cemented carbide	284
3.3.2. Place of testing cleaning efficacy of the conveyor belt	285
3.3.3. Testing of the conveyor belt scraper	286
4. Conclusions	287
References	287
